from different research fields on topics related to polyphenols such as their isolation and purification assessment of their antioxidant activity prevention from oxidative stress induced diseases and use as food additives The polyphenols used in the present studies are derived from a great variety of plants ranging from well known species to rare ones that are only found in specific regions Moreover some of the studies provide evidence that polyphenols may be used for the prevention and treatment of common diseases such as diabetes mellitus Alzheimers disease cardiovascular and intestinal diseases Importantly in several of the studies green extraction methods for the isolation of polyphenols were developed using modern technologies where few or no organic solvents were used in order to minimize environmental and health impacts

**The Polyphenolic Composition and Antioxidant Capacity of Yellow European Plums (*Prunus Domestica* L.) and Novel Golden Prunes** Carolyn Dowling,2014 **Investigation and Optimization of Methods for the Extraction of Antioxidants and Polyphenols from Yellow European Plums (*Prunus Domestica* L.).** Andrea DiNardo,2018 Yellow European Plums YEPs contain health promoting compounds which may be extracted for use in functional food and nutraceutical industries Conventional extraction methods include heat reflux extraction HRE and Soxhlet extraction but often result in reduced extraction yields due to high temperature requirements and long extraction durations Microwave assisted extraction MAE is one method which can mitigate these drawbacks because it allows rapid and homogenous heating the biomatrix The objective of this thesis is to determine the effects of solvent and solvent concentration time and temperature during MAE in comparison to other extraction methods Concentration of phenolic compounds specifically ascorbic acid chlorogenic acid neochlorogenic acid were quantified using a Folin Ciocalteau method and HPLC analysis Antioxidant scavenging of free radicals such as 2,2-diphenyl-1-picrylhydrazyl DPPH and Fe<sup>3+</sup> tripyridyltriazine FRAP were used to determine antioxidant capacity of samples It was observed that MAE yielded larger concentrations of bioactive compounds in comparison to other extraction methods

**Antioxidant and Anti-aging Action of Plant Polyphenols** Christophe Hano,2020-11-13 Polyphenols are plant non nutrient natural products or plant secondary metabolites found in fruits vegetables and seeds that we consume daily Their intakes from fruit vegetables seeds and nuts are associated with lower risks of chronic and age related degenerative diseases Aging is a dynamic and complex biological process involving multiple actors and subject to a number of genetic and or environmental influences The famous free radical theory of aging proposed by Prof Harman in 1956 states that free radicals lead to oxidative damage causing cellular dysfunction and physiological decline and are responsible for aging with the appearance of degenerative diseases and eventually death From this hypothesis antioxidant molecules are capable of slowing down the aging process through the successful scavenging of radical oxygen and nitrogen species Polyphenols have been shown to prolong the lifespan of different model species operating through a well conserved antioxidant mechanism This collection of research and review articles covers the most recent advances in the use of plant polyphenols ranging from their biological properties and possible functions as medicines the

importance of traditional medicines as a source of inspiration the rationalization of new uses of plant extracts which lead to applications in modern medicine the status of modern green chemistry extraction methods to some reflections on future prospects

**Polyphenols in Plants** Ronald Ross Watson, 2018-08-14 Polyphenols in Plants Isolation Purification and Extract Preparation 2nd edition provides a detailed insight into polyphenols that occur naturally in plants and how they can be affected during growth and development then effectively removed and optimized for various applications in food production Historically plants have been the major sources for drugs and health promotion While there are a small number of nutrients contained the growing focus is on the very diverse complex ring structures polyphenols that are not nutritious In order to study or use them in patient treatment the polyphenols need to be isolated identified and purified for application and study This book brings together experts in the field who share their ongoing examination of isolation and purification of polyphenols as well as determination of their structures and composition Polyphenols in Plants covers a range of new topics including polyphenols in vegetable waste and agricultural byproducts extraction methods and characterization of polyphenols and isolation techniques in the development of new compounds and their use in cancer therapy This book will be useful to plant scientists and dietary supplement producers as well as scientists in the food industry and alternative medicine who are interested in the specific health benefits of various dietary extracts and other polyphenol resources Fully revised and updated to present the latest developments in the field Advances understanding of isolation characterization and identification of critical polyphenols vital to industrial development as therapies Defines conditions of growth affecting polyphenol levels Describes techniques critical to identifying and defining polyphenols

**Phenolic Composition and In-vitro Antioxidant Activity of Prunes and Prune Juice** Jennifer Lyn Donovan, 1997 **Polyphenols: Properties, Recovery, and Applications** Charis M. Galanakis, 2018-01-11 Polyphenols Properties Recovery and Applications covers polyphenol properties health effects and new trends in recovery procedures and applications Beginning with coverage of the metabolism and health effects of polyphenols the book then addresses recovery analysis processing issues and industrial applications The book not only connects the properties and health effects of polyphenols with recovery processing and encapsulation issues but also explores industrial applications that are affected by these aspects including both current applications and those under development Covers the properties and health effects of polyphenols along with trends in recovery procedures and applications Addresses recovery analysis and processing issues Concludes with coverage of the industrial applications of polyphenols

**Advances in Technologies for Producing Food-relevant Polyphenols** Jose Cuevas Valenzuela, Jose Rodrigo Vergara-Salinas, Jose Ricardo Perez-Correa, 2016-09-19 The growing concern for human wellbeing has generated an increase in the demand for polyphenols secondary plant metabolites that exhibit different bioactive properties This increasing demand is mainly due to the current applications in the food industry where polyphenols are considered essential for human health and nutrition Advances in Technologies for Producing Food relevant Polyphenols provides researchers

scientists engineers and professionals involved in the food industry with the latest methodologies and equipment useful to extract isolate purify and analyze polyphenols from different available sources such as herbs flora vegetables fruits and agro industrial wastes Technologies currently used to add polyphenols to diverse food matrices are also included This book serves a reference to design and scale up processes to obtain polyphenols from different plant sources and to produce polyphenol rich foods with bioactive properties e g antioxidant antibacterial antiviral anticancer properties of interest for human health and wellbeing
