in the text New exercises in each chapter and answers to many of the exercises are provided via the FTP site A supplementary Instructor's Solutions Manual is available. The book begins with a demonstration of how the three basic types of equations parabolic hyperbolic and elliptic can be derived from random walk models. It then covers an exceptionally broad range of topics including questions of stability analysis of singularities transform methods. Green's functions and perturbation and asymptotic treatments Approximation methods for simplifying complicated problems and solutions are described and linear and nonlinear problems not easily solved by standard methods are examined in depth Examples from the fields of engineering and physical sciences are used liberally throughout the text to help illustrate how theory and techniques are applied to actual problems. With its extensive use of examples and exercises this text is recommended for advanced undergraduates and graduate students in engineering science and applied mathematics as well as professionals in any of these fields. It is possible to use the text as in the past without use of the new Maple material.
