Input/Output Intensive Massively Parallel Computing Peter Brezany, 1997-04-09 Massively parallel processing is currently the most promising answer to the quest for increased computer performance This has resulted in the development of new programming languages and programming environments and has stimulated the design and production of massively parallel supercomputers The efficiency of concurrent computation and input output essentially depends on the proper utilization of specific architectural features of the underlying hardware This book focuses on development of runtime systems supporting execution of parallel code and on supercompilers automatically parallelizing code written in a sequential language Fortran has been chosen for the presentation of the material because of its dominant role in high performance programming for scientific and engineering applications Scientific and Technical Aerospace Reports, 1995 **Energy Research Abstracts**, 1990 *Image Understanding Workshop* United States.
