Échocardiographie Doppler chez le patient en état critique Bernard Cholley, Philippe Vignon, SRLF (Société de Réanimation de Langue Française), Antoine Vieillard-Baron, Michel Slama, 2011-06-17 Durant ces derni res ann es l utilisation de l chocardiographie Doppler s est g n ralis e en r animation et en anesth sie et ce pour de multiples raisons Le nombre de r animateurs et d anesth sistes r animateurs qui se sont form s cette technique et le nombre de publications scientifiques qui s y rapportent ont augment de mani re exponentielle Le domaine de comp tence sp cifique aux r animateurs et aux anesth sistes r animateurs s est

progressivement pris en compte et imposé de lui-même sur le terrain. De nouveaux concepts tels que celui du stéthoscope ultrasonique et du monitoring fonctionnel de l'état hémodynamique des patients en état critique ont émergé et se sont affinés. Les appareils d'échocardiographie toujours plus performants se sont miniaturisés pour atteindre la taille et le poids d'un ordinateur portable. Enfin et surtout les mentalités ont évolué aussi bien chez les cardiologues que chez les réanimateurs de toute origine. L'échocardiographie Doppler est désormais unanimement considérée comme un moyen d'évaluation incontournable des patients en état critique. L'échocardiographie Doppler chez le patient en état critique : un outil de diagnostic et de monitoring fait le point sur l'état de l'art de cette technique en constante évolution. Son fil rouge est la défaillance d'organe. Son esprit est l'approche par syndromes, la concision et le caractère didactique fondés sur de nombreux exemples et la sélection de la littérature pertinente sur le sujet. Un ouvrage qui fait le point sur l'état de l'art en échocardiographie Doppler : une technique incontournable en constante évolution pour offrir aux réanimateurs et anesthésistes-réanimateurs les connaissances théoriques et pratiques indispensables à la prise en charge des patients en état critique.
