Long and Deep Tunnels Vittorio Guglielmetti, Shulin Xu, Gianni Alberto Arrigoni, Piergiorgio Grasso, 2016-04-15 The design and construction of long and deep tunnels i e tunnels under mountains characterised by either considerable length and or overburden represent a considerable challenge The scope of this book is not to instruct how to design and construct such tunnels but to share a method to identify the potential hazards related to the process of designing and constructing long and deep tunnels to produce a relevant comprehensive analysis and listing to quantify the probability and consequences and to design proper mitigation measures and countermeasures The design developed using probabilistic methods is verified during execution by means of the so called Plan for Advance of the Tunnel PAT method which allows adapting the design and control parameters of the future stretches of the tunnel to the results of the stretches already finished using the monitoring data base Numerous criteria are given to identify the key parameters necessary for the PAT procedure Best practices of excavation management with the help of real time monitoring and control are also provided Furthermore cost and time evaluation systems are analysed Finally contractual aspects related to construction by contract are investigated for best development and application of models more appropriate for tunnelling construction contracts The work will be of interest to practising engineers designers consultants and students in mining underground tunnelling transportation and construction engineering as well as to foundation and geological engineers urban planners developers and architects
