The Palgrave Handbook of Peacebuilding in Africa Tony Karbo, Kudrat Virk, 2018-01-30 This handbook offers a critical assessment of the African agenda for conflict prevention peacemaking peacekeeping and peacebuilding the challenges and opportunities facing Africa's regional organisations in their efforts towards building sustainable peace on the continent and the role of external actors including the United Nations Britain France and South Asian troop contributing countries In so doing it revisits the late Ali Mazrui's concept of Pax Africana calling on Africans to take responsibility for peace and security on their own continent The creation of the African Union in 2002 was an important step towards realising this ambition and has led to the development of a new continental architecture for more robust conflict management But as the volume's authors show the quest for Pax Africana faces challenges Combining thematic analyses and case studies this book will be of interest to both scholars and policymakers working on peace security and governance issues in Africa

Tanzania Operational Plan Report Fy 2013 United States United States Department of State,2014-11-12 Since 2004 PEPFAR Tanzania has been working closely with the United Republic of Tanzania and other donors including the Global Fund to Fight AIDS Tuberculosis and Malaria to respond to the HIV epidemic PEPFAR T the GFATM and the URT share a symbiotic relationship in Tanzania

While PEPFAR T predominantly focuses on services and system strengthening GFATM is responsible for commodity procurement and some systems strengthening and the URT provides policy framework infrastructure systems and personnel. Deficits in resources governance and health systems continue to complicate Tanzania's ability to adequately respond to HIV/AIDS. As a result Tanzania's health programs especially for HIV are highly dependent upon donor funding. Foreign funds account for 97% of the Mainland's HIV/AIDS response of which 90% come from the combined efforts of PEPFAR T 74% and the GFATM 16%. In addition the country grapples with weak health infrastructure shortages of health and social workers high levels of stigma cumbersome government procurement systems weak management and strategic planning and poor accountability. According to the 2011 UNAIDS Report on the Global AIDS Epidemic adult HIV prevalence in the country is estimated at 5.8% and an estimated 1.6 million Tanzanians are living with HIV of which 1.3 million are OVC. An estimated 84 000 AIDS related deaths occur in Tanzania each year. According to the 2007/08 Tanzania HIV and AIDS and Malaria Indicator Survey the impact of the epidemic varies significantly by region with the highest prevalence region Iringa estimated at 15.7% and the lowest estimated Zanzibar at 0.6% and with a significant difference in the prevalence between urban 9% and rural 5% areas. The data also reveal significant sex differentials in HIV prevalence with male prevalence at 5% and female prevalence at 7%. A new THMIS was conducted in 2011/2012 and is due to be released in late March 2013. Despite a generalized epidemic key populations play a critical role in HIV transmission dynamics. Data indicate that injection drug use specifically heroin use is on the rise in urban Tanzania and Zanzibar. Studies carried out in Dar es Salaam indicate that the HIV prevalence is 42% among people who inject drugs 2007 and 31.4% among sex workers 2010 while unpublished data for men who have sex with men in Dar es Salaam indicates prevalence over 30% 2012. PEPFAR support to Tanzania has enabled a dramatic increase in the number of adults and children accessing ART with 364 000 individuals receiving treatment in FY2012. Also during FY2012 a total of 3 370 000 individuals received HIV testing and counseling 1 100 000 pregnant women were tested and counseled through PMTCT services 526 000 OVC received support and 152 000 VMMC took place.

Angola Operational Plan Report Fy 2013 United States United States Department of State, 2014-11-12. In 2011 Secretary Clinton called on the world to join in the fight for an AIDS Free generation and in 2012 the Secretary revealed a PEPFAR President's Emergency Plan for AIDS Relief Blueprint outlining the path to making this a reality. Aligned with the Global Health Initiative GHI Strategy our Partnership Framework PF and the Blueprint's policy imperative Angola's PEPFAR initiatives are based on strategic scientifically sound investments to scale up core HIV prevention to maximize impact. Based on a capacity building systems strengthening model PEPFAR Angola is working with partners to effectively mobilize coordinate and efficiently use resources to save more lives sooner. The focus will be on key populations on women and girls to increase gender equality and ending stigma and discrimination against people living with HIV. Cross Cutting Appendix A This will be measured by setting benchmarks that are regularly assessed with the long term goal of country

Uganda Operational Plan Report Fy 2013 United States United States Department of State, 2014-11-12 In September 2012 the Ministry of Health MOH released the results of the Uganda AIDS Indicator Survey UAIS 2011 which indicated that Uganda continues to experience a severe HIV epidemic HIV prevalence in the general population 15 to 59 years old is estimated to be 7.3% in 2011 compared to 6.4% in 2004.5 HIV prevalence is higher among women 8.3% than among men 6.1% Compared to the 2004.5 UAIS survey the magnitude of change in HIV prevalence varied across regions Central Western Southwestern and Northern regions remain the worst affected while modest declines in prevalence were recorded in the East Central and Mid Eastern regions Of particular concern is the rise in HIV prevalence among young people aged 15-24 years generally and in all age groups specifically in the West Nile and North East regions that previously were least affected UNAIDS projects the number of new annual infections at 150,000 in 2011 an increase from 120,000 in 2004 AIDS mortality is estimated at 62,000 deaths in 2011 the lowest estimate in a long decline since 2000 reflecting the significant expansion of ART The UNAIDS most recent World AIDS Day Report warned of increasing unprotected sex both sexes and multiple partners women The estimated number of people infected with HIV has risen to 1.39 million 55% of whom are female and 14% are children under the age of 15 years HIV is predominantly heterosexually transmitted accounting for 75-80% of new infections However population subgroups show that the most affected and the risk factors and drivers of HIV infections have evolved in recent years Studies show an HIV prevalence of 1.2% in university students 15.40% in fishing communities 37% among sex workers 18% in the partners of sex workers and 13% in the group of men with a history of having sex with men Strikingly 35% of new infections occur amongst self-reported monogamous individuals which raises concerns regarding rising multiple concurrent partnerships The remaining transmissions are largely due to mother to child HIV transmission In response to the 2011 UAIS results PEPFAR revised its programmatic and technical approaches and

targets to better respond to Uganda's escalating epidemic. The 2013 COP is based on scientific evidence prioritized proven interventions, resources matched effectively across subpopulations, and efforts directed towards sources of new infections to assist the HIV/AIDS epidemic response in Uganda. The 2013 COP is the product of a consultative process that involved the GOU, PEPFAR implementing partners, IP, and bilateral and multilateral donors.

Ghana Operational Plan Report Fy 2013

United States Department of State, 2014-11-12. HIV prevalence and incidence have been declining in the general population since prevalence peaked at 2.4% in 1998 and is presently estimated at 1.5% in the general population. Nevertheless, the numbers of persons living with HIV and AIDS continue to increase due to population growth and to the decline in AIDS deaths as more infected persons receive anti-retroviral treatment (ART). HIV infection rates among young pregnant women attending antenatal clinics have been declining as measured by the national HIV sentinel surveillance system. HIV prevalence among persons 15-24 years old is estimated to be 1.7% and is expected to decline. HIV prevalence in key populations: 11% in sex workers and 18% in MSM, and in tuberculosis patients 15% continues to be much higher than that of the general population. From a modes of transmission study (MOT) conducted in 2008, it is estimated that sexual transmission accounts for the majority of new adult infections and that almost 40% of new adult infections can be attributed to FSWs, their clients, and the partners of their clients, and MSM. Twenty-nine percent of new infections are attributed to casual heterosexual sex, and the partners of those who engage in casual heterosexual sex. It is unclear if informal transactional sex by people who do not consider themselves sex workers, e.g., university students, represents another driver of the epidemic. An estimated 9% of all new infections is attributed to MTCT of HIV.
