

Waves Interference Remote Lab 2 Interference

(This lesson is designed for a student working remotely.)

This lab uses the [Waves Interference](https://phet.colorado.edu/sims/html/waves-interference/latest/waves-interference_en.html) simulation from PhET Interactive Simulations at University of Colorado Boulder, under the CC-BY 4.0 license.

https://phet.colorado.edu/sims/html/waves-interference/latest/waves-interference_en.html

Note about prior learning: Students should have completed [Waves on a String Remote Lab](#) and [Waves Interference Remote Lab 1](#) (or [Waves Intro Remote Lab](#)) or lessons with similar learning goals.

Learning Goals: Students will be able to:

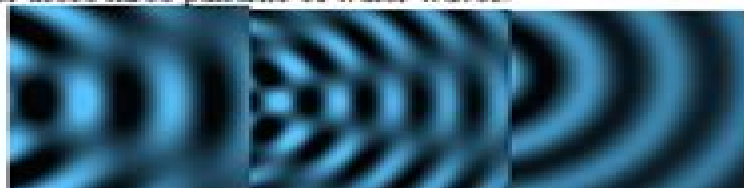

- Create an interference pattern with two sources, and determine the ways to change the pattern.
- Find points of constructive and destructive interference by eye and by using the detectors.
- Put up a barrier to see how the waves move through one or two slits. What sort of pattern do the slits create? How can you change this pattern?

Develop your understanding: Open the [Interference](#) screen, then explore to make water waves with varying patterns.

Explain your understanding:

- Consider these three patterns of water waves:

A

B

C

- Describe the similarities and differences of the three patterns of water waves.
 - The wave patterns between pictures A and B are similar because they both have interference patterns which shows there are multiple sources. Picture C's wave patterns does not show any wave interference. A and C also share the similarity of frequencies and this is shown from the crests and troughs of the wave. C and B do not have any other similarities other than the amplitude of the waves.
- Experiment to make similar patterns, then explain how you can use the simulation to make each.

of the Electromagnetic Waves in the Dielectric Media ,1993 In this Letter we first present a new computer simulation model developed to study the propagation of electromagnetic waves in a dielectric medium in the linear and nonlinear regimes The model is constructed by combining a microscopic model used in the semi classical approximation for the dielectric media and the particle model developed for the plasma simulations The model was then used for studying linear and nonlinear wave propagation in the dielectric medium such as an optical fiber It is shown that the model may be useful for studying nonlinear wave propagation and harmonics generation in the nonlinear dielectric media
