Ioannou,2001 **Cooperative Adaptive Cruise Control Human Factors Study** Vaughan W. Inman,Steven Jackson,Brian H. Philips,2016 This study set out to examine the following diverse questions regarding cooperative adaptive cruise control CACC use Does CACC reduce driver workload relative to manual gap control Does CACC increase the probability of driver distraction relative to manual gap control Does CACC result in reduced driver arousal relative to manual gap control Does CACC result increase the ability to avoid a crash when exposed to an extreme breaking event Will drivers trust the CACC system These questions were addressed in an experiment conducted in the Federal Highway Administration Highway Driving Simulator A total of 49 licensed drivers were tested with 12 or 13 participants in each of 4 groups All of the groups drove in the third position in a five vehicle platoon in which all of the other vehicles were equipped with simulated CACC The groups differed as to whether the participant vehicle was equipped with CACC and the type of event at the end of the drive that disturbed the longitudinal spacing of the platoon As

assessed by the National Aeronautics and Space Administration Task Load Index the CACC system did reduce perceived driver workload relative to driving without cruise control CACC users appeared slightly more likely to engage in diversionary activities e.g listening to the car radio than control group drivers CACC yielded a substantial and statistically reliable reduction in the probability of a crash No evidence was obtained to suggest that use of CACC leads to lower levels of driver arousal than manual gap control Participants showed a great deal of trust in the CACC system In a situation where all of the control participants used the brake to maintain a comfortable gap only 2 of 36 CACC users overrode the system with the brake or accelerator

Predictive Cruise Control for Road Vehicles Using Road and Traffic Information Péter Gáspár,Balázs Németh,2018-11-19 This book focuses on the design of a multi criteria automated vehicle longitudinal control system as an enhancement of the adaptive cruise control system It analyses the effects of various parameters on the average traffic speed and the traction force of the vehicles in mixed traffic from a macroscopic point of view and also demonstrates why research and development in speed control and predictive cruise control is important The book also summarises the main steps of the system's robust control design from the modelling to its synthesis and discusses both the theoretical background and the practical computation method of the control invariant sets The book presents the analysis and verification of the system both in a simulation environment and under real world conditions By including the systematic design of the predictive cruise control using road and traffic information it shows how optimization criteria can lead to multiobjective solutions and the advanced optimization and control design methods required The book focuses on a particular method by which the unfavourable effect of the traffic flow consideration can be reduced It also includes simulation examples in which the speed design is performed while the analysis is carried out in simulation and visualization environments This book is a valuable reference for researchers and control engineers working on traffic control vehicle control and control theory It is also of interest to students and academics as it provides an overview of the strong interaction between the traffic flow and an individual vehicle cruising from both a microscopic and a macroscopic point of view
