

☐ Click and drag the VOLTAGE METER one square grid box below the (+) charge

☐ Record the reading on the Voltmeter in Table One (Trial A)

☐ Then drag another positive charge so that it is DIRECTLY STACKED on TOP of the FIRST (can be tricky- but make sure that you can't tell a difference from the screenshot above)

Record that value.

☐ Continue to drag the correct combination into the stack according to the table!

To take a charge off without completely resetting- click and drag it back to the box you got it from.

**TABLE ONE: STACK 'EM**

TRIAL	# Of (+) charges in the stack	# Of (-) charges in stack	? Voltmeter Reading from 0.5 meters
A	1	0	_____ V
B	2	0	_____ V
C	3	0	_____ V
D	4	0	_____ V
E	5	0	_____ V
F	1	1	_____ V
G	2	2	_____ V
H	1	2	_____ V

? Between trials A-B, you doubled the amount of (+) charges! Did your Voltmeter reading for the Electric Field Force double too? Explain if this is consistent with what you thought!

*Quantum Physics is NOT Weird* Paul J. van Leeuwen, 2022-02-26

Quantum Physics shows us that we create what we observe Countless experiments confirm that it is our information which manifests reality Matter and time are created by our observation This is not only true when we do experiments in laboratories but it works the same way in everyday reality We manifest our own experiences Science does not prove that our consciousness must be a product of our material brain On the contrary Consciousness emerging from the brain is just a belief This book tells the story how physics did develop from a quest to understand nature into its current highly myopic materialistic paradigm The profound spiritual message of Quantum Physics is ignored to our detriment A wonderful very readable book that will convince thousands upon thousands of serious readers including students of science why consciousness is necessary to understand quantum physics and why materialist science is not adequate I give the book my highest recommendation Amit Goswami PhD author of The Self Aware Universe A monumental book A masterpiece in disguise Prof Emer dr Dirk K F Meijer University of Groningen

**Active Learning in College Science** Joel J. Mintzes, Emily M. Walter, 2020-02-23 This book explores evidence based practice in college science teaching It is grounded in disciplinary education research by practicing scientists who have chosen to take Wieman's 2014 challenge seriously and to investigate claims about the efficacy of alternative strategies in college science teaching In editing this book we have chosen to showcase outstanding cases of exemplary practice supported by solid evidence and to include practitioners who offer models of teaching and learning that meet the high standards of the scientific disciplines Our intention is to let these distinguished scientists speak for themselves and to offer authentic guidance to those who seek models of excellence Our primary audience consists of the thousands of dedicated faculty and graduate students who teach undergraduate science at community and technical colleges 4 year liberal arts institutions comprehensive regional campuses and flagship research universities In keeping with Wieman's challenge our primary focus has been on identifying classroom practices that encourage and support meaningful learning and conceptual understanding in the natural sciences The content is structured as follows after an Introduction based on Constructivist Learning Theory Section I the practices we explore are Eliciting Ideas and Encouraging Reflection Section II Using Clickers to Engage Students Section III Supporting Peer Interaction through Small Group Activities Section IV Restructuring Curriculum and Instruction Section V Rethinking the Physical Environment Section VI Enhancing Understanding with Technology Section VII and Assessing Understanding Section VIII The book's final section IX is devoted to Professional Issues facing college and university faculty who choose to adopt active learning in their courses The common feature underlying all of the strategies described in this book is their emphasis on actively engaging students who seek to make sense of natural objects and events Many of the strategies we highlight emerge from a constructivist view of learning that has gained widespread acceptance in recent years In this view learners make sense of the world by forging connections between new ideas and those that are part of their existing knowledge base For most students that knowledge base is riddled with a host of naïve notions misconceptions and alternative conceptions they have acquired throughout their lives To a considerable extent the job of the teacher is to coax out these ideas to help students understand how their ideas differ from the scientifically accepted view to assist as students restructure and reconcile their newly acquired knowledge and to provide opportunities for students to evaluate what they have learned and apply it in novel circumstances Clearly this prescription demands far more than most college and university scientists have been prepared for
