Cryptography and Cryptanalysis in MATLAB Marius Iulian Mihailescu,Stefania Loredana Nita,2021 Master the essentials of cryptography and cryptanalysis and learn how to put them to practical use Each chapter of this book starts with an introduction to the concepts on which cryptographic algorithms are based and how they are used in practice providing fully working examples for each of the algorithms presented Implementation sections will guide you through the entire process of writing your own applications and programs using MATLAB Cryptography and Cryptanalysis in MATLAB will serve as your definitive go to cryptography reference whether you are a student professional developer or researcher showing how a multitude of cryptographic challenges can be overcome using the powerful tools of MATLAB You will Discover MATLAB s cryptography functions Work with conversion mechanisms in MATLAB Implement cryptographic algorithms using arithmetic operations Understand the classical simple cryptosystems that form the basis of modern cryptography Develop fully working solutions encryption decryption operations Study pseudo random generators and their real life implementations Utilize hash functions by way of practical examples Implement solutions to defend against practical cryptanalysis methods and attacks Understand asymmetric and symmetric encryption systems and how to use them Leverage visual cryptography steganography and chaos based cryptography

Image Encryption Fathi E. Abd El-Samie,Hossam Eldin H. Ahmed,Ibrahim F. Elashry,Mai H. Shahieen,Osama S. Faragallah,El-Sayed M. El-Rabaie,Saleh A. Alshebeili,2013-12-14 Presenting encryption algorithms with diverse characteristics Image Encryption A Communication Perspective examines image encryption algorithms for the purpose of secure wireless communication It considers two directions for image encryption permutation based approaches and substitution based approaches Covering the spectrum of image encryption principles and techniques the book compares image encryption with permutation and diffusion based approaches It explores number theory based encryption algorithms such as the Data Encryption Standard the Advanced Encryption Standard and the RC6 algorithms It not only details the strength of various encryption algorithms but also describes their ability to work within the limitations of wireless communication systems Since some ciphers were not designed for image encryption the book explains how to modify these ciphers to work for image encryption It also provides instruction on how to search for other approaches suitable for this task To make this work comprehensive the authors explore communication concepts concentrating on the orthogonal frequency division multiplexing OFDM system and present a simplified model for the OFDM communication system with its different implementations Complete with simulation experiments and MATLAB codes for most of the simulation experiments this book will help you gain the understanding

required to select the encryption method that best fulfills your application requirements

MATLAB Implementation of the Steganographic Algorithm F5 Wassim Al Chamaa, 2019-05-07 Project Report from the year 2018 in the subject Computer Science Programming language English abstract The F5 algorithm proposed by Westfeld is still one of the most known algorithms in the field of DCT based steganography It can make a JPEG image a container of a secret message where no one knows the presence of the message except the sender and the intended receiver In this programming work we show how to realize the F5 algorithm via Matlab We present the block diagrams of embedding and extracting processes and the entire Matlab code of the F5 algorithm Some Notes about the F5 Matlab code 1 The implementation code works according to the method proposed by Andreas Westfeld in his paper F5 A Steganographic Algorithm High Capacity Despite Better Steganalysis Huffman coding and decoding are implemented using the Matlab JPEG Toolbox developed by Phil Sallee 2 The two part Matlab code included in the report embedding and extracting parts can be executed in Matlab IDE The embedding part reads the cover JPEG file and the message file we want to hide then it creates a Stego JPEG file according to the F5 algorithm On the other side The extracting part reads the Stego JPEG file and then it extracts the hidden message file 3 The F5 code calls the main two functions of Phil Sallee s Matlab Toolbox JPEG reading and writing These functions make it easier to access and manipulate the quantized DCT coefficients of a given JPEG file Using Sallee s Toolbox should accord with the used operating system whether it is 32 or 64 bits 4 The F5 code contains the function to form the image matrix to show the input and output images Running this function requires ALL the Sallee s Toolbox to be installed Otherwise the user can REMOVE this function from the code since it doesn t affect the main F5 process and thus keep ONLY using the main two function of the Sallee s Toolbox 5 The message file we want to hide can be any file of any kind and whatever its extension The size of the message file should be appropriate for the size of the used cover JPEG image so no errors will occur when executed

Hybrid Encryption Algorithms over Wireless Communication Channels Mai Helmy Shaheen, 2021-03-04 This book presents novel hybrid encryption algorithms that possess many different characteristics In particular Hybrid Encryption Algorithms over Wireless Communication Channels examines encrypted image and video data for the purpose of secure wireless communications A study of two different families of encryption schemes are introduced namely permutation based and diffusion based schemes The objective of the book is to help the reader selecting the best suited scheme for the transmission of encrypted images and videos over wireless communications channels with the aid of encryption and decryption quality metrics This is achieved by applying number theory based encryption algorithms such as chaotic theory with different modes of operations the Advanced Encryption Standard AES and the RC6 in a pre processing step in order to achieve the required permutation and diffusion The Rubik s cube is used afterwards in order to maximize the number of permutations Transmission of images and videos is vital in today s communications systems Hence an effective encryption and modulation schemes are a must The author adopts Orthogonal

Frequency Division Multiplexing OFDM as the multicarrier transmission choice for wideband communications For completeness the author addresses the sensitivity of the encrypted data to the wireless channel impairments and the effect of channel equalization on the received images and videos quality Complete simulation experiments with MATLAB codes are included The book will help the reader obtain the required understanding for selecting the suitable encryption method that best fulfills the application requirements *Algorithms in Matlab* Etienne A.
