EVE Online: ISK Strategy Guide Y. Michael Xu, 2012-10-19 The unofficial guide to becoming an ISK billionaire in EVE Online

Lunar Meteoroid Impacts and How to Observe Them Brian Cudnik, 2010-03-10 The genesis of modern searches for observable meteoritic phenomena on the Moon is the paper by Lincoln La Paz in Popular Astronomy magazine in 1938 In it he argued that the absence of observed fashes of meteoritic impacts on the Moon might be interpreted to mean that these bodies are destroyed as luminous meteors in an extremely rarefied lunar atmosphere The paper suggested the possibility of systematic searches for such possible lunar meteors With these concepts in mind I was surprised to note a transient moving bright speck on the Moon on July 10 1941 It appeared to behave very much as a lunar meteor would except that the poorly estimated duration would lead to a strongly hyperbolic heliocentric velocity Thus the idea of systematic searches for both possible lunar meteors and meteoritic impact fashes was born It was appreciated that much time might need to be expended to achieve any positive results Systematic searches were carried out by others and myself chiefly in the years 1945 1965 and became a regular program at the newly founded Association of Lunar and Planetary Observers or ALPO

Distant Worlds Peter Bond, 2010-01-08 This book recounts the epic saga of how we as human beings have come to understand the Solar System The story of our exploration of the heavens Peter Bond reminds us began thousands of years ago with the naked eye observations of the earliest scientists and philosophers Over the centuries as our knowledge and understanding inexorably broadened and deepened we faltered many times frequently labored under misconceptions and faced seemingly insurmountable obstacles to understanding Yet despite overwhelming obstacles a combination of determined observers brilliant thinkers courageous explorers scientists and engineers has brought us particularly over the last five decades into a second great age of human discovery At our present level of understanding some fifty years into the Space Age the sheer volume of images and other data being returned to us from space has only increased our appetite for more and

more detailed information about the planets moons asteroids and comets of the Solar System Taking a much needed overview of how we now understand these distant worlds in our cosmic neighborhood Bond not only celebrates the extraordinary successes of planetary exploration but reaffirms an important truth For seekers of knowledge there will always be more to explore An astonishing saga of exploration In this much needed overview of where we stand today Peter Bond describes the achievements of the astronomers space scientists and engineers who have made the exploration of our Solar System possible A clearly written and compelling account of the Space Age the book includes Dramatic accounts of the daring resourcefulness and ferocious competitive zeal of renowned as well as almost forgotten space pioneers Clear explanations of the precursors to modern astronomy including how ancient natural philosophers and observers first took the measure of the heavens More than a hundred informative photographs maps simulated scenarios and technical illustrations many of them in full color Information dense appendices on the physical properties of our Solar System as well as a comprehensive list of 50 years of Solar System missions Organized into twelve chapters focused on the objects of our exploration the individual planets our Moon the asteroids and comets Bond s text shows how the great human enterprise of space exploration may on occasion have faltered or wandered off the path but taken as a whole amounts to one of the great triumphs of human civilization
