Place the information below in your notebook, printed on the back of page 1.

1. Nonvascular plants (mosses, liverworts, hornworts) must grow in moist places to keep photosynthesis going. They need water for the gametes.
2. Vascular plants have a few unique seed types. They have a thick, waxy coating of cuticle to keep water out.
3. In seed plants, an embryo (seed) is a tiny baby plant that develops from a zygote. The seed also contains endosperm, which provides food for the embryo's earliest development.
4. Gymnosperms produce eggs with thick, waxy protective coats. They also produce seed cones and needle-like leaves.
5. Angiosperms, which are a plant's reproductive system, allow plants to store water and nutrients. Angiosperms also have a thick, waxy seed coat and a protective seed coat.
6. Angiosperms are divided into two main groups: those that produce flowers (eudicotyledons) and those that do not (monocotyledons). Angiosperms are the most diverse group of plants.
