Kozovits, Mercedes M.C. Bustamante, 2013-11-19 Over recent decades climate changes especially revealed through alteration in rainfall patterns with apparent intensification of the dry season have been documented throughout Latin America At the same time this region of the globe has displayed strong economic growth along with profound changes in land use and emission of air pollutants Long term studies have shown that functional groups of plants from tropical and sub tropical rainforests and savannas the largest and most diverse biomes in the region present different sensitivities to climate change increasing CO₂ and atmospheric deposition of nitrogen for example resulting in evident changes in community structure and dynamics In general these factors have led to a reduction in plant diversity Ozone though less studied in the region has been monitored in the major urban centres and its relation to land use change as through biomass burning has become evident The main results of plant responses to pollutants and climate change are presented *Biology, Controls and Models of Tree Volatile Organic Compound Emissions* Ülo Niinemets, Russell K. Monson, 2013-07-08 Plant driven volatile organic compound BVOC emissions play a major role in atmospheric chemistry including ozone and photochemical smog formation in the troposphere and they extend the atmospheric lifetime of the key greenhouse gas methane Furthermore condensation of photo oxidation products of BVOCs leads to formation of secondary organic aerosols with profound implications for the earth's solar radiation budget and climate Trees represent the plant life form that most contributes to BVOC emissions which gives global forests a unique role in regulating atmospheric chemistry Written by leading experts in the field the focus is on recent advancements in understanding the controls on plant driven BVOC emissions including efforts to quantitatively predict emissions using computer models particularly on elicitation of emissions under biotic and abiotic stresses molecular mechanisms of volatile synthesis and emission and the role of emissions in plant stress tolerance *Tropical Ecosystems: Structure, Functions and Challenges in the Face of Global Change* Satish Chandra Garkoti, Skip J. Van Bloem, Peter Z. Fulé, Rajeev L. Semwal, 2019-09-24 The book brings together research topics having a broad focus on human and climate change impacts on the terrestrial ecosystems in the tropics in general and more specifically from the most significant and vulnerable Himalayan ecosystem A total of 16 contributions included in the book cover a diverse range of global change themes such as the impacts of changing temperature and precipitation on soil ecosystems forest degradation extent and impacts of invasive species plant responses to pollution climate change impacts on biodiversity and tree phenology environmental changes associated with land use importance of traditional knowledge in climate change adaptation timberline ecosystems and role of integrated landscape modeling for sustainable management of natural resources The book is a collective endeavour of an international multidisciplinary group of scientists focused on improving our understanding of the impacts of global change on the structure and functioning of tropical ecosystems and addressing the challenges of their future sustainable management We hope that the book will help researchers working in the areas of ecology and environmental science to update their knowledge We also expect that natural resource managers and policy planners will

find explanations for some of their observations and hypotheses on multiple global change factors impacting tropical ecosystems and especially Himalayan ecosystems

Sulphur in Plants Y.P. Abrol, A. Ahmad, 2003-05-31 Sulphur S plays a pivotal role in various plant growth and development processes being a constituent of sulphur containing amino acids cysteine and methionine and other metabolites viz glutathione and phytochelatin co factor of enzymes which contribute to stress repair and amelioration of heavy metal toxicity Besides a number of S containing components are biologically active and thus a source for use as medicinal value The basic global issue before the agricultural scientist and world community is to evolve cultivars and develop methodologies for efficient use of inputs to enhance agricultural productivity This is particularly true of the developing countries which are going to see maximum rise in population with changing food demands and declining availability of land Amongst the inputs nutrients play a crucial role The major requirement is for N P and K followed by several micro nutrients In this context reports of world wide S deficiency in the agricultural systems are relevant The reasons are many Broadly speaking reduction in S emission use of S free N P and K fertilizers and higher biomass production contributed the maximum Despite the need for sulphur as an essential plant nutrient and the substantial returns expected from its use very little attention has been given to fill the gap between supply and demand of S

Effect of High Temperature on Crop Productivity and Metabolism of Macro Molecules Amitav Bhattacharya, 2019-06-14 Effect of High Temperature on Crop Productivity and Metabolism of Macro Molecules presents a comprehensive overview on the direct effect of temperatures defined as high a definition which increasingly includes a great number of geographic regions As temperature impacts the number of base growth days it is necessary to adapt plant selection strategize planting times and understand the expected impact of adaptive steps to ensure maximum plant health and crop yield Global warming climate change and change in environmental conditions have become common phrases in nearly every scientific seminar symposium and meeting thus these changes in climatic patterns constrain normal growth and reproduction cycles This book reviews the effect of high temperature on agricultural crop production and the effect of high temperature stress on the metabolic aspects of macro molecules including carbohydrates proteins fats secondary metabolites and plant growth hormones Focuses on the effects of high temperature on agriculture and the metabolism of important macro molecules Discusses strategies for improving heat tolerance thus educating plant and molecular breeders in their attempts to improve efficiencies and crop production Provides information that can be applied today and in future research

Chloroplast Biogenesis Udaya C. Biswal, M.K. Raval, 2003-10-31 Chloroplast is the organelle where the life giving process photosynthesis takes place it is the site where plants and algae produce food and oxygen that sustain our life The story of how it originates from proplastids and how it ultimately dies is beautifully portrayed by three authorities in the field Basanti Biswal Udaya Biswal and M K Raval I consider it a great privilege and honor to have been asked to write this foreword The book Chloroplast biogenesis from proplastid to gerontoplast goes much beyond photosynthesis The character of the book is different from that of many currently available books because it provides an integrated approach to cover the entire life span of the organelle including its senescence and death The books available are mostly confined to the topics relating to the build up or development of chloroplast during greening The story of organelle biogenesis without description of the events associated with its regulated dismantling during genetically programmed senescence is incomplete A large volume of literature is available in this area of chloroplast senescence accumulated during the last 20 years Although some of the findings in this field have been organized in the form of reviews the data in the book are generalized and integrated with simple text and graphics This book describes the structural features of proplastid and its transformation to fully mature chloroplast which is subsequently transformed into gerontoplast exhibiting senescence syndrome The book consists of five major chapters Programmed Cell Death in Higher Plants E. Lam, H. Fukuda, J. Greenberg, 2000-12-31 The molecular mechanisms which determine whether the cells of a multicellular organism will live or commit suicide have become a popular field of research in biology during the last decade Cell death research in the plant field has also been expanding rapidly in the past 5 years This special volume of Plant Molecular Biology seeks to bring together examples of a diverse array of experimental approaches in a single volume From the differentiation of tracheary elements in vascular plants to the more specialized cell death model of the aleurone in cereals this volume will bring the reader up to date with the characterization of different plant model systems that are currently being studied This endeavor should complement general overviews of plant cell death mechanisms that have been published elsewhere by providing more detailed information on various aspects of this field to interested graduate students and more senior biologists alike **Climate Change 2007 - Impacts, Adaptation and Vulnerability** Intergovernmental Panel on Climate Change. Working Group II, 2007 The Climate Change 2007 volumes of the Fourth Assessment Report of the Intergovernmental Panel on Climate Change IPCC provide the most comprehensive and balanced assessment of climate change available This IPCC Working Group II volume provides a completely up to date scientific assessment of the impacts of climate change the vulnerability of natural and human environments and the potential for response through adaptation Written by the world's leading experts the IPCC volumes will again prove to be invaluable for researchers students and policymakers and will form the standard reference works for policy decisions for government and industry worldwide **Climate Change and the Microbiome** D. K. Choudhary, Arti

Mishra,Ajit Varma,2021-10-13 This book highlights the impact of climate change on the soil microbiome and its subsequent effects on plant health soil plant dynamics and the ecosphere It also discusses emerging ideas to counteract these effects e g through agricultural applications of functional microbes to ensure a sustainable ecosystem Climate change is altering the soil microbiome distributions and thus the interactions in microbiome and plant soil microorganism Improvement of our understanding of microbe microbe and plant microbe interaction under changing climatic conditions is essential because the overall impact of these interactions under varying adverse environmental conditions is lacking This book has been designed to understand the impact of climate change i e mainly salt and drought stress on the soil microbiome and its impact on plant yield and the ecosphere The book is organized into four parts The first part reviews the impact of climate change on the diversity and richness of the soil microbiome The second part addresses effects of climate change on plant health The third part discusses effects on soil plant dynamics and functionality e g soil productivity The final part deals with the effects of climate change on ecosystem functioning and also discusses potential solutions The book will appeal to students and researchers working in the area of soil science agriculture molecular biology plant physiology and biotechnology
