**and Emerging Therapies for Epithelial Ovarian Cancer: Basic Research and Clinical Perspectives** Stergios Boussios, Eleftherios Pierre Samartzis, Nicholas Pavlidis, J. Alejandro Perez-Fidalgo, 2023-11-06 Epithelial ovarian cancer EOC is the most lethal gynecological disorder due to a lack of effective early detection strategies Worldwide approximately 230 000 women are diagnosed annually whereas 150 000 die It represents the seventh most commonly diagnosed cancer among women in the world with 5 year survival rate of 46% More than one fifth of EOC have been related to hereditary conditions Considerable efforts have been made to implement screening of the general population to diagnose EOC early nevertheless this has been ineffective and there is no approved strategy Nowadays new approaches for early diagnosis and prevention based on molecular genomics are in development Whole genome sequencing has established the potency of the somatic genome characterised with diverse DNA repair deficiencies that can be used to stratify EOCs into distinct biological groups with predictive signatures of resistance or relapse The incorporation of next generation sequencing NGS into clinical practice

remains challenging for two reasons Firstly the EOC risk is not clear for some of the included genes and secondly the variant of uncertain significance rates increase as more genes are analyzed Finally beyond germline pathogenic variants somatic mutations may also affect therapeutic choices and as such upfront tumor sequencing may be equally important to NGS particularly as we continue to challenge treatment paradigms in the first line management of EOC Critical Energy Minerals: A Material Enabler for Carbon Neutrality Xiangyun Gao,Xiaoqi Sun,Zhi Cao,Weiqiong Zhong,2024-04-09 In line with the Paris Agreement the global community has committed to holding the rise in global temperatures below 1.5°C pre industrial levels At COP26 held recently in Glasgow participating parties are expected to strengthen their commitment to ambitious 2030 emissions reduction targets to achieve net zero emissions by the middle of the 21st century Achieving these ambitious climate goals requires all countries to phase out coal consumption speed up electrification of transport technologies and mobilize significant investment in renewable energy technologies Childhood Hearing Loss, An Issue of Otolaryngologic Clinics of North America, E-Book Nancy M. Bureau of the Census,1887 *Advances toward improved understanding and treatment of uncommon ovarian cancer types and subtypes* Robb Hollis,Mihaela Carmen Cristea ,Mignon Van Gent,2024-10-22 Ovarian cancer is an umbrella term for a collection of distinct disease entities histotypes Until now the majority of research has focussed on the most common histotype high grade serous ovarian carcinoma HGSOC which accounts for 70% of cases The less common histotypes including endometrioid clear cell mucinous low grade serous carcinosarcoma and non epithelial histotypes have received far less research attention Accordingly while major advances in our understanding of HGSOC have led to molecularly directed therapies that improve patient outcomes progress in less common histotypes has lagged behind Notably many of the uncommon histotypes demonstrate resistance to conventional chemotherapy regimens and their inherent biological differences suggest most are unlikely to respond to emerging molecular therapeutics designed to target the biology of common ovarian cancer types **Molecular Targeted Therapy in Oncology: Lessons from Pharmacogenetics and Pharmacoeigenetics** Saber Imani,Matteo Becatti,Md. Asaduzzaman
