even political problem but it has evolved into a socially complex so called wicked problem of conflicting social governance  
and economics This creates an extreme economic obstacle where the value of ecosystem services remains low and diffuse  
and the transactions costs remain high and multiple Using Uber like business platform technology and a shared governance  
model a symbiotic demand for environmental benefits is created Enabling multi sector transactions for environmental  
benefits this platform innovation would remedy the tragedy of the commons the economic nemesis to achieving landscape  
sustainability In a nutshell to sustain our agricultural landscapes a transdisciplinary approach supported by a shared  
governance model housed within a multi sided platform is needed This book introduces an assessment framework identifying  
governance actors styles and ratios for socio ecological systems The assessment uses a new governance compass to identify  
the types of actors completing which tasks and identifies the styles of governance used to complete the tasks It is aimed to
