## Writing Resources

Besides the information noted in your course materials and this handout, other writing resources are available:

- *The Mayfield Handbook of Technical and Scientific Writing* and other on-line resources are available at <<http://web.mit.edu/uaa/www/writinglinks>>.
- The Writing and Communication Center <<http://web.mit.edu/writing>> is located in 14N-317, x3-3090.
- IEEE website: <http://standards.ieee.org/guides/style/index.html>

## Standard Scientific Research Paper Components

Scientific papers generally follow a conventional format that includes a title, an abstract, a reference (or Literature Cited) section and the components of the IMRAD structure:

### The IMRAD structure

Introduction	answers "why?"
Methods	answers "when, where, how, how much?"
Results	answers "what?"
And	
Discussion	answers "so what?"

## Writing Process

### Sample Writing Process

Prewriting	<ul style="list-style-type: none"><li>• Make notes, scribble ideas; start generating text, drawing figures, sketching out presentation ideas.</li><li>• Ignore neatness, spelling, and sentence structure--get the ideas down.</li><li>• Analyze audience and purpose to focus your writing.</li></ul>
Writing	<ul style="list-style-type: none"><li>• Start with whatever section is easiest to write.</li><li>• Skip around to different sections as needed.</li><li>• Keep writing.</li></ul>
Revision	<ul style="list-style-type: none"><li>• Work on content first, then structure, then style.</li><li>• Keep focused on your main purpose: communicating, reasoning, presenting clearly.</li><li>• Get feedback.</li><li>• Circle back to prewriting as needed.</li></ul>
Editing	<ul style="list-style-type: none"><li>• Check all data for accuracy.</li><li>• Review for grammatical, mechanical, and usage errors.</li></ul>
Proofread	<ul style="list-style-type: none"><li>• Print and read your report again. Often we don't see errors on-line as easily as we do on a hard copy.</li></ul>

## **Science Research Paper Template:**

*Writing Scientific Research Articles* Margaret Cargill, Patrick D. T. O'Connor, 2011-09-13 Margaret Cargill's background as a linguist and research communications educator and Patrick O'Connor's experience as both research scientist and educator synergize to improve both the science and art of scientific writing. If the authors' goal is to give scientists the tools to write and publish compelling well-documented clear narratives that convey their work honestly and in proper context, they have succeeded admirably. *Veterinary Pathology* July 2009. The book is clearly written, has a logical step-by-step structure, is easy to read, and contains a lot of sensible advice about how to get scientific work published in international journals. The book is a most useful addition to the literature covering scientific writing. *Aquaculture International* April 2009. *Writing Scientific Research Articles: Strategy and Steps* guides authors in how to write as well as what to write to improve their chances of having their articles accepted for publication in international peer-reviewed journals. The book is designed for scientists who use English as a first or an additional language for research students and those who teach them paper writing skills and for early career researchers wanting to hone their skills as authors and mentors. It provides clear processes for selecting target journals and writing each section of a manuscript, starting with the results. The stepwise learning process uses practical exercises to develop writing and data presentation skills through analysis of well-written example papers. Strategies are presented for responding to referee comments as well as ideas for developing discipline-specific English language skills for manuscript writing. The book is designed for use by individuals or in a class setting. Visit the companion site at [www.writeresearch.com.au](http://www.writeresearch.com.au) for more information.

**Researcher's Guide: Templates and guidelines for Research article in SCI journal** Dr. M. Jayachandran, In the realm of academic research and scholarly publishing, achieving recognition in prestigious SCI (Science Citation Index) Journals is a pinnacle of success. However, the path to successful publication can be arduous, filled with intricate guidelines, rigorous standards, and the need for absolute precision. That's where *Researcher's Guide: Templates and Guidelines for Research Articles in SCI Journals* comes to your aid. This meticulously crafted book is designed as an indispensable companion for researchers, scientists, and academics of all levels who aspire to not only meet but exceed the expectations of SCI Journals. Whether you are a seasoned scholar or an early career researcher, this guide empowers you with the tools and knowledge needed to navigate the complex world of research article writing with finesse and confidence.

**Key Features:**

- Templates for Every Section:** The heart of this book lies in its meticulously designed templates for each section of a research article, from abstract to conclusion. These templates are like a compass, guiding you through the intricate structure of your paper while ensuring compliance with the exacting standards of SCI Journals.
- Guidelines and Best Practices:** In addition to templates, this guide provides comprehensive guidelines and best practices for crafting research articles that captivate readers and reviewers alike. Learn how to create compelling titles, write engaging abstracts, conduct thorough literature reviews, present results effectively, and construct impactful discussions.

Ethical Considerations Understand the ethical considerations that underpin responsible research and publishing Discover how to navigate issues related to authorship conflicts of interest and the responsible use of data Peer Review Insights Gain insights into the peer review process and learn strategies for effectively handling reviewer feedback Transform the peer review process from a challenge into an opportunity for improvement Resources for Continued Growth Beyond the templates and guidelines this book equips you with valuable resources including additional reading materials citation style guides and references to further hone your research writing skills Interdisciplinary Perspective While the book provides a strong foundation in scientific writing it is designed to be adaptable across disciplines ensuring its relevance to a wide range of research fields including engineering social sciences natural sciences and more This book is more than just a book it is your gateway to the world of impactful scientific publishing Whether you aim to disseminate groundbreaking discoveries contribute to your field s body of knowledge or simply enhance your research writing skills this guide is your trusted companion on the journey to success Don t let the intricacies of research article writing hold you back With this book you have the tools templates and expertise at your fingertips to elevate your research articles to the highest standards of excellence ensuring your work is not only published but celebrated in the esteemed pages of SCI Journals Embark on your journey to scholarly excellence today with Researcher s Guide Templates and Guidelines for Research Articles in SCI Journals

*Course-Based Undergraduate Research* Nancy H. Hensel, 2023-07-03 Co published with the Council on Undergraduate Research Undergraduate research has long been recognized as a high impact practice HIP but has unfortunately been offered only to juniors and seniors and to very few of them often in summer programs This book shows how to engage

students in authentic research experiences built into the design of courses in the first two years thus making the experience available to a much greater number of students Research that is embedded in a course especially general education courses addresses the issue of how to expand undergraduate research to all students Research has shown that students who have early experiences in undergraduate research are more likely to pursue further research prior to and after graduation This is also an issue of social justice because it makes the benefits of undergraduate research available to students who must work during the academic year and in the summer It is widely accepted that the skills developed through undergraduate research help prepare students for their future careers The book addresses all aspects of the topic including What are appropriate expectations for research in the first two years How to design appropriate course based research for first and second year students How to mentor a class rather than individual students How students can disseminate the results of their research Possible citizen science projects appropriate for the first and second years Providing additional resources available to support course based research in the first two years Designed for faculty at four year and two year colleges and including examples from the sciences the social sciences and the humanities the strategies and methods described can be adapted to disciplines not specifically mentioned in the book Many faculty are hesitant to engage first and second year students in undergraduate research because they worry students don't know enough to conduct authentic research in their discipline because they worry about the time it will take to develop activities for these students and because they wonder how they can mentor a whole class of students doing research The authors have successfully dealt with these issues and provide examples of how it's done

**Document Classifier: Emerging Research and Opportunities** Paul, Dimple Valayil, 2021-01-08 The main problems that prevent fast and high quality document processing in electronic document management systems are insufficient and unstructured information information redundancy and the presence of large amounts of undesirable user information The human factor has a significant impact on the efficiency of document search An average user is not aware of the advanced option of a query language and uses typical queries Development of a specialized software toolkit intended for information systems and electronic document management systems can be an effective solution of the tasks listed above Such toolkits should be based on the means and methods of automatic keyword extraction and text classification The categorization or classification of texts into predefined categories has witnessed a booming interest in the last 10 years due to the increased availability of documents in digital form and the ensuing need to organize them Thus research on keyword extraction advancements in the field and possible future solutions is of great importance in current times Developing a Keyword Extractor and Document Classifier Emerging Research and Opportunities presents an information extraction mechanism that can process many kinds of inputs realize the type of text and understand the percentage of the keywords that has to be stored This mechanism then supports information extraction and information categorization mechanisms This module is used to support a text summarization mechanism which leads with the help of the keyword extraction module to text categorization It employs lexical and information retrieval techniques to extract phrases from the document text that are likely to characterize it and determines the category of the retrieved text to present a summary to the users This book is ideal for practitioners stakeholders researchers academicians and students who are interested in the development of a new keyword extractor and document classifier method

**Teaching Undergraduate Science** Linda C. Hodges, 2023-07-03 This book is written for all science or engineering faculty who have ever found themselves baffled and frustrated by their undergraduate students lack of engagement and learning The author an experienced scientist faculty member and educational consultant addresses these issues with the knowledge of faculty interests constraints and day to day concerns in mind Drawing from the research on learning she offers faculty new ways to think about the struggles their science students face She then provides a range of evidence based teaching strategies that can make the time faculty spend in the classroom more productive and satisfying Linda Hodges reviews the various learning problems endemic to teaching science explains why they are so common and persistent and presents a digest of key ideas and strategies to address them based on the research she has undertaken into the literature on the cognitive sciences and education Recognizing that faculty have different views about teaching different comfort levels with alternative teaching approaches and are often pressed for time Linda Hodges takes these constraints into account by first offering a framework for thinking purposefully about course design and teaching choices and then providing a range of strategies to address very specific teaching barriers whether it be students motivation engagement in class ability to problem solve their reading comprehension or laboratory research or

writing skills Except for the first and last chapters the other chapters in this book stand on their own i e can be read in any order and address a specific challenge students have in learning and doing science Each chapter summarizes the research explaining why students struggle and concludes by offering several teaching options categorized by how easy or difficult they are to implement Some for example can work in a large lecture class without a great expenditure of time others may require more preparation and a more adventurous approach to teaching Each strategy is accompanied by a table categorizing its likely impact how much time it will take in class or out and how difficult it will be to implement Like scientific research teaching works best when faculty start with a goal in mind plan an approach building on the literature use well tested methodologies and analyze results for future trials Linda Hodges message is that with such intentional thought and a bit of effort faculty can succeed in helping many more students gain exciting new skills and abilities whether those students are potential scientists or physicians or entrepreneurs Her book serves as a mini compendium of current research as well as a protocol manual a readily accessible guide to the literature the best practices known to date and a framework for thinking about teaching
