US educational achievement on international

assessments Ben Dalton,2011-05-23 The debate about the performance of US students on international assessments of educational achievement routinely fails to account for one consistently stark result US achievement is bifurcated between a group of high performing Asian and white students and an exceptionally low performing group of black and Hispanic students By summarizing results across 20 major international tests conducted since 1995 this research paper shows that when US racial and ethnic groups are separately compared with other countries Asian and white students regularly perform at or near the top of international rankings while black and Hispanic students typically rank at or near the bottom Furthermore the United States has a substantially larger minority population than all other developed countries and minority status is not synonymous with internationally comparable factors such as socioeconomic level or immigrant status The fact that overall US scores are disproportionately influenced by race and ethnicity suggests that researchers and reformers must reconsider how they use and interpret the results of international achievement tests The research paper recommends providing and analyzing cross national data separately by ethnic groups to inform approaches to improving education for all students

Global Perspectives on Educational Testing Keena Arbuthnot,2017-11-01 This book provides a refined definition of standardized educational test fairness that can be utilized in multiple contexts to better understand the experiences and perspectives of diverse groups of test takers *Linking Competence to Opportunities to Learn* Xiufeng Liu,2009-05-01 For many people a high standard for student learning is desirable This is what underlies current standard based science education reforms around the world As someone who was born and brought up in a less privileged home and educated in a resource limited school environment in a developing country I always had to study hard to meet various standards from elementary to high school to university My first book in English published over 10 years ago Liu X 1996 Mathematics and Science Curriculum Change in the People's Republic of China Lewiston NY The Edwin Mellen Press provided me an opportunity to examine standards i.e Chinese national science teaching syllabi from a historical and political point of view I argued that standards are developed for particular political agendas in order to maintain the privileged position of certain groups i.e urban residents in a society at expenses of others i.e rural

residents Thus underneath standards is systematic discrimination and injustice Since then I have had opportunities to study the issue of standards in much more breadth and depth This book Linking Competence to Opportunities to Learn Models of Competence and data mining provides me an opportunity to examine standards from a different perspective opportunity to learn Making the Grades Todd Farley, 2011-01-01 In this alternately amusing and appalling expos of the standardized test industry fifteen year veteran Todd Farley describes statisticians who make decisions about students without even looking at their test answers state education officials willing to change the way tests are scored whenever they don't like the results and massive multi national for profit testing companies who regularly opt for expediency and profit over the altruistic educational goals of teaching and learning Although there are absurd moments as when Farley and coworkers had to grade students based on how they described the taste of their favorite food the enormous importance of standardized tests in the post No Child Left Behind era make this no laughing matter This book is dynamite The nice personal voice makes it utterly accessible and enticing wholly apart from the terribly important ammunition it provides to those of us in the testing wars at national and local levels Jonathan Kozol author of *Savage Inequalities*
