Assembly of the Photosystem II Membrane-Protein Complex of Oxygenic Photosynthesis Julian J. Eaton-Rye, Roman Sobotka, 2017-08-08 Photosystem II is a 700 kDa membrane protein super complex responsible for the light driven splitting of water in oxygenic photosynthesis The photosystem is comprised of two 350 kDa complexes each made of 20 different polypeptides and over 80 co factors While there have been major advances in understanding the mature structure of this photosystem many key protein factors involved in the assembly of the complex do not appear in the holoenzyme The mechanism for assembling this super complex is a very active area of research with newly discovered assembly factors and subcomplexes requiring characterization Additionally the ability to split water is inseparable from light induced photodamage that arises from radicals and reactive O₂ species generated by Photosystem II chemistry Consequently to sustain water splitting a self repair cycle has evolved whereby damaged protein is removed and replaced so as to extend the working life of the complex Understanding how the biogenesis and repair processes are coordinated is among several important questions that remain to be answered Other questions include how and when are the inorganic cofactors inserted during the assembly and repair processes and how are the subcomplexes protected from photodamage during assembly Evidence has also been obtained for Photosystem II biogenesis centers in cyanobacteria but do these also exist in plants Do the molecular mechanisms associated with Photosystem II assembly shed fresh light on the assembly of other major energy transducing complexes such as Photosystem I or the cytochrome b₆ f complex or indeed other respiratory

complexes The contributions to this Frontiers in Plant Science Research Topic are likely to reveal new details applicable to the assembly of a range of membrane protein complexes including aspects of self assembly and solar energy conversion that may be applied to artificial photosynthetic systems In addition a deeper understanding of Photosystem II assembly particularly in response to changing environmental conditions will provide new knowledge underpinning photosynthetic yields which may contribute to improved food production and long term food security

Russo,2014-10-02 Head hits cause brain damage but not always Should we ban sport to protect athletes Exposure to electromagnetic fields is strongly associated with cancer development does that mean exposure causes cancer Should we encourage old fashioned communication instead of mobile phones to reduce cancer rates According to popular wisdom the Mediterranean diet keeps you healthy Is this belief scientifically sound Should public health bodies encourage consumption of fresh fruit and vegetables Severe financial constraints on research and public policy media pressure and public anxiety make such questions of immense current concern not just to philosophers but to scientists governments public bodies and the general public In the last decade there has been an explosion of theorizing about causality in philosophy and also in the sciences This literature is both fascinating and important but it is involved and highly technical This makes it inaccessible to many who would like to use it philosophers and scientists alike This book is an introduction to philosophy of causality one that is highly accessible to scientists unacquainted with philosophy to philosophers unacquainted with science and to anyone else lost in the labyrinth of philosophical theories of causality It presents key philosophical accounts concepts and methods

using examples from the sciences to show how to apply philosophical debates to scientific problems

Organizational Cognition Davide Secchi, Rasmus Gahrn-Andersen, Stephen J. Cowley, 2022-09-30 Cognition is usually associated with brain activity Undoubtedly some brain activity is necessary for it to function However the last thirty years have revolutionized the way we intend and think about cognition These developments allow us to think of cognition as distributed in the sense that it needs tools artifacts objects and other external entities to allow the brain to operate properly Organizational Cognition The Theory of Social Organizing takes this perspective and applies it to the organization by introducing a model that defines the elements that allow cognition to work This model shows that cognition needs the combined and simultaneous presence of micro aspects i e the biological individual and macro super structural elements e g organizational climate culture norms values rules These two become practice of cognition as they materialize in a meso

domain this is any action that allows individuals to perform their daily duties Due to the micro meso macro interactions this has been called the 3M Model Most of what happens in the meso domain relates to exchanges between two or more people i.e. it is a social activity This is usually mentioned in the perspectives above but it is rarely explored By bringing meso activities to the center of cognition the book develops and presents the Theory of Social Organizing Not only this is useful to organizational scholars but it also opens a new path for cognition research
