The Lobster Moth Caterpillar

The lobster moth caterpillar is an incredible creature! It has a vibrant orange and black striped body. It looks like a lobster or a shrimp. That's how it received its name. The caterpillar spends most of its time in the trees eating leaves and foliage.

The lobster moth caterpillar eats exclusively from leaves and foliage. This makes it a specialist for its environment. As it develops into an adult, it undergoes an incredible transformation. Its body is no longer plump and colorful. It will be slim and grayish brown. It will have a row of yellow spots along each side of its back.

This metamorphosis isn't the only thing that makes the lobster moth caterpillar unique. Another cool feature is that when threatened, it uses defense mechanisms. The caterpillar can protect itself from predators. When disturbed, it opens up its front legs to look like pincers and scare off any attackers. It also has two small horns on either side of its head. These resemble a foul odor when disturbed. This nasty smell helps ward off predators. They no longer want to prey on the caterpillar.

The lobster moth caterpillar also has some unusual behaviors during winter. Some of the most unusual behaviors are when they hibernate in large groups or trees. They join in communal activities. These could include molting. Climbing their favorite trees. These gatherings are quite remarkable. They can sometimes be seen in large groups. This is a very unusual sight to see in a forest.

At first, the adult lobster moth caterpillar may look like a decaying leaf (black color).
