Discovering the North-West Passage Glenn M. Stein,2015-10-27 From 1850 to 1854 the ambitious Commander Robert McClure captained the HMS Investigator on a voyage in search of the missing Franklin Expedition which sailed from England into the Arctic in 1845 to map the last uncharted section of the North West Passage The Investigator and her consort the Enterprise were to pass through the Bering Strait from the west but a Pacific storm separated them never to meet again Obsessed with traversing the passage McClure pressed on and HMS Investigator spent three years trapped in pack ice in Mercy Bay before the crew abandoned ship on foot This book chronicles the voyage in detail McClure and his relationships with his officers are at the heart of the story of the arduous journey vividly illustrated by the paintings of Lt Samuel Cresswell

Random Vibration and Spectral Analysis/Vibrations aléatoires et analyse spectral A. Preumont,2013-06-29 I became interested in Random Vibration during the preparation of my PhD dissertation which was concerned with the seismic response of nuclear reactor cores I was initiated into this field through the classical books by Y K Lin S H Crandall and a few others After the completion of my PhD in 1981 my supervisor M Gera din encouraged me to prepare a course in Random Vibration for fourth and fifth year students in Aeronautics at the University of Liege There was at the time very little material available in French on that subject A first draft was produced during 1983 and 1984 and revised in 1986 These notes were published by the Presses Poly techniques et Universitaires Romandes Lausanne Suisse in 1990 When Kluwer decided to publish an English translation of the book in 1992 I had to choose between letting Kluwer translate the French text in extenso or doing it myself which would allow me to carry out a substantial revision of the book I took the second option and decided to rewrite or delete some of the original text and include new material based on my personal experience or reflecting recent technical advances Chapter 6 devoted to the response of multi degree of freedom structures has been completely rewritten and Chapter 11 on random fatigue is entirely new The computer programs which have been developed in parallel with these chapters have been incorporated in the general purpose finite element software SAMCEF developed at the University of Liege **Trends in Biomathematics: Modeling Epidemiological, Neuronal, and Social Dynamics** Rubem P. Mondaini,2023-07-24 This volume gathers together selected peer reviewed works presented at the BIOMAT 2022

International Symposium which was virtually held on November 7 11 2022 with an organization staff based in Rio de Janeiro Brazil Topics touched on in this volume include infection spread in a population described by an agent based approach the study of gene essentiality via network based computational modeling stochastic models of neuronal dynamics and the modeling of a statistical distribution of amino acids in protein domain families The reader will also find texts in epidemic models with dynamic social distancing with no vertical transmission and with general incidence rates Aspects of COVID 19 dynamics the use of an SEIR model to analyze its spread in Brazil the age dependent manner of modeling its spread pattern the impact of media awareness programs and a web based computational tool for Non invasive hemodynamics evaluation of coronary stenosis are also covered Held every year since 2001 The BIOMAT International Symposium gathers together in a single conference researchers from Mathematics Physics Biology and affine fields to promote the interdisciplinary exchange of results ideas and techniques promoting truly international cooperation for problem discussion BIOMAT volumes published from 2017 to 2021 are also available by Springer

Séminaire de Probabilités XL Catherine Donati-Martin, Michel Émery, Alain Rouault, Christophe Stricker, 2007-07-25 Who could have predicted that the Séminaire de Probabilités would reach the age of 40 This long life is first due to the vitality of the French probabilistic school for which the Séminaire remains one of the most specific media of exchange Another factor is the amount of enthusiasm energy and time invested year after year by the Rédacteurs Michel Ledoux dedicated himself to this task up to Volume XXXVIII and Marc Yor made his name inseparable from the Séminaire by devoting himself to it during a quarter of a century Browsing among the past volumes can only give a faint glimpse of how much is owed to them keeping up with the standard they have set is a challenge to the new Rédaction In a changing world where the status of paper and ink is questioned and where alas pressure for publishing is increasing in particular among young mathematicians we shall try and keep the same direction Although most contributions are anonymously refereed the Séminaire is not a mathematical journal our first criterion is not mathematical depth but usefulness to the French and international probabilistic community We do not insist that everything published in these volumes should have reached its final form or be original and acceptance/rejection may not be decided on purely scientific grounds
