Measuring the Cosmos David H. Clark, Matthew D. H. Clark, 2004 Humans have always viewed the heavens with wonder and awe The skies have inspired reflection on the vastness of space the wonder of creation and humankind's role in the universe In just over one hundred years science has moved from almost total ignorance about the actual distances to the stars and earth's place in the galaxy to our present knowledge about the enormous size mass and age of the universe We are reaching the limits of observation and therefore the limits of human understanding Beyond lies only our imagination seeded by the theories of physics In Measuring the Cosmos science writers David and Matthew Clark tell the stories of both the well known and the unsung heroes who played key roles in these discoveries These true accounts reveal ambitions conflicts failures as well as successes as the astonishing scale and age of the universe were finally established Few areas of scientific research have witnessed such drama in the form of ego clashes priority claims or failed or even falsified theories as that resulting from attempts to measure the universe Besides giving credit where long overdue Measuring the Cosmos explains the science behind these achievements in accessible language sure to appeal to astronomers science buffs and historians

Victorian Glassworlds Isobel Armstrong, 2008-04-24 Isobel Armstrong s startlingly original and beautifully illustrated book tells the stories that spring from the mass production of glass in nineteenth century England Moving across technology industry local history architecture literature print culture the visual arts optics and philosophy it will transform our understanding of the Victorian period The mass production of glass in the nineteenth century transformed an ancient material into a modern one at the same time transforming the environment and the nineteenth century imagination It created a new glass culture hitherto inconceivable Glass culture constituted Victorian modernity It was made from infinite variations of the prefabricated glass panel and the lens The mirror and the window became its formative elements both the texts and constituents of glass culture The glassworlds of the century are heterogeneous They manifest themselves in the technologies of the factory furnace in the myths of Cinderella and her glass slipper circulated in print media in the ideologies of the conservatory as building type in

the fantasia of the shopfront in the production of chandeliers in the Crystal Palace and the lens made images of the magic lantern and microscope But they were nevertheless governed by two inescapable conditions First to look through glass was to look through the residues of the breath of an unknown artisan because glass was mass produced by incorporating glassblowing into the division of labour Second literally a new medium glass brought the ambiguity of transparency and the problems of mediation into the everyday It intervened between seer and seen incorporating a modern philosophical problem into bodily experience Thus for poets and novelists glass took on material and ontological political and aesthetic meanings Reading glass forwards into Bauhaus modernism Walter Benjamin overlooked an early phase of glass culture where the languages of glass are different The book charts this phase in three parts Factory archives trade union records and periodicals document the individual manufacturers and artisans who founded glass culture the industrial tourists who described it and the systematic politics of window breaking Part Two culminating in glass under glass at the Crystal Palace reads the glassing of the environment including the mirror the window and controversy round the conservatory and their inscription in poems and novels Part Three explores the lens from optical toys to philosophical instruments as the telescope and microscope were known A meditation on its history and phenomenology Victorian Glassworlds is a poetics of glass for nineteenth century modernity **Princeton Alumni Weekly** Author,2001 Discovery and Classification in Astronomy Steven J.
