Parallel Processing in Computational Mechanics Hojjat Adeli, 2020-08-26 Introduces mechanical engineers to high performance computing using the new generation of computers with vector and parallel processing capabilities that allow the solution to problems beyond the ken of traditional computers The chapters present an introduction and overview explain several methods

Mathematical Modeling and Simulation Kai Velten, 2009-06-01 This concise and clear introduction to the topic requires only basic knowledge of calculus and linear algebra all other concepts and ideas are developed in the course of the book Lucidly written so as to appeal to undergraduates and practitioners alike it enables readers to set up simple mathematical models on their own and to interpret their results and those of others critically To achieve this many examples have been chosen from various fields such as biology ecology economics medicine agricultural chemical electrical mechanical and process engineering which are subsequently discussed in detail Based on the author's modeling and simulation experience in science and engineering and as a consultant the book answers such basic questions as What is a mathematical model What types of models do exist Which model is appropriate for a particular problem What are simulation parameter estimation and validation The book relies exclusively upon open source software which is available to everybody free of charge The entire book software including 3D CFD and structural mechanics simulation software can be used based on a free CAELinux Live DVD that is available in the Internet works on most machines and operating systems

PETSc for Partial Differential Equations: Numerical Solutions in C and Python Ed Bueler, 2020-10-22 The Portable Extensible Toolkit for Scientific Computation PETSc is an open source library of advanced data structures and methods for solving linear and nonlinear equations and for managing discretizations This book uses these

modern numerical tools to demonstrate how to solve nonlinear partial differential equations PDEs in parallel It starts from key mathematical concepts such as Krylov space methods preconditioning multigrid and Newton's method In PETSc these components are composed at run time into fast solvers Discretizations are introduced from the beginning with an emphasis on finite difference and finite element methodologies The example C programs of the first 12 chapters listed on the inside front cover solve mostly elliptic and parabolic PDE problems Discretization leads to large sparse and generally nonlinear systems of algebraic equations For such problems mathematical solver concepts are explained and illustrated through the examples with sufficient context to speed further development PETSc for Partial Differential Equations addresses both discretizations and fast solvers for PDEs emphasizing practice more than theory Well structured examples lead to run time choices that result in high solver performance and parallel scalability The last two chapters build on the reader's understanding of fast solver concepts when applying the Firedrake Python finite element solver library This textbook the first to cover PETSc programming for nonlinear PDEs provides an on ramp for graduate students and researchers to a major area of high performance computing for science and engineering It is suitable as a supplement for courses in scientific computing or numerical methods for differential equations **Monthly Catalogue, United States Public Documents**, 1991

Messina, Almerico Murli, 1992 This book covers the key topic areas of parallel computer architectures operating systems and software environments algorithms and their implementations mathematical software and large scale scientific applications Contained are the papers from contributed talks and poster sessions presented at the conference held in Capri Italy in June 1990 The goals of the conference reflected in this proceedings were to assess the progress made in the 1980 s in parallel computation for scientific applications and to examine trends in large scale computation as we enter the 1990 s **Elliptic Marching Methods and Domain Decomposition** Patrick J. Roache, 1995-06-29 One of the first things a student of partial differential equations learns is that it is impossible to solve elliptic equations by spatial marching This new book describes how to do exactly that providing a powerful tool for solving problems in fluid dynamics heat transfer electrostatics and other fields characterized by discretized partial differential equations Elliptic Marching Methods and Domain Decomposition demonstrates how to handle numerical instabilities i e limitations on the size of the problem that appear when one tries to solve these discretized equations with marching methods The book also shows how marching methods can be superior to multigrid and pre conditioned conjugate gradient PCG methods particularly when used in the context of multiprocessor parallel computers Techniques for using domain decomposition together with marching methods are detailed clearly illustrating the benefits of these techniques for applications in engineering applied mathematics and the physical sciences
