Even More Brain-powered Science Thomas O'Brien, 2011 The third of Thomas O'Brien's books designed for 50 Co12 grade science teachers Even More Brain Powered Science uses questions and inquiry oriented discrepant events or experiments or demonstrations in which the outcomes are not what students expect or to dispute misconceptions and challenge students to think about discuss and examine the real outcomes of the experiments O'Brien has developed interactive activities many of which use inexpensive materials or to engage the natural curiosity of both teachers and students and create new levels of scientific understanding

Conceptual metaphor and embodied cognition in science learning Tamer Amin, Fredrik Jeppsson, Jesper Haglund, 2018-10-03 Scientific concepts are abstract human constructions invented to make sense of complex natural phenomena Scientists use specialised languages diagrams and mathematical representations of various kinds to convey these abstract constructions This book uses the perspectives of embodied cognition and conceptual metaphor to explore how learners make sense of these concepts That is it is assumed that human cognition including scientific cognition is grounded in the body and in the material and social contexts in which it is embedded Understanding abstract concepts is therefore grounded via metaphor in knowledge derived from sensory and motor experiences arising from interaction with the physical world The volume consists of nine chapters that examine a number of intertwined themes how systematic metaphorical mappings are implicit in scientific language diagrams mathematical representations and the gestures used by scientists how scientific modelling relies fundamentally on metaphor and can be seen as a form of narrative cognition how implicit metaphors can be the sources of learner misconceptions how conceptual change and the acquisition of scientific expertise involve learning to coordinate the use of multiple implicit metaphors and how effective instruction can build on recognising the embodied nature of scientific cognition and the role of metaphor in scientific thought and learning The volume also includes three extended commentaries from leading researchers in the fields of cognitive linguistics the learning sciences and science education in which they reflect on theoretical methodological and pedagogical issues raised in the book This book was originally published as a

thermal conductivity Diffusivity and surface tension *Gas Properties Computational Procedure Suitable for Electronic Calculators* James Randolph Andrews, 1974 A calculating procedure is presented based on a least squares polynomial approximation for duplicating existing tabular values of selected thermodynamic and transport properties of various important gases Most of the data refer to ideal gases however for functions of both temperature and pressure the pressure has been specified such that the polynomial approximations have only temperature as the independent variable Suggested algorithms for polynomial evaluations up to the sixth degree are presented and optimized for hand held or desk top calculators Using the suggested polynomial fits and a suitable calculator it is possible to duplicate existing table values for the various functions of the selected gases without interpolation of reference to the tables per se The error of the included fits is generally less than 0.5% With the lowest order approximation the error can be as high as 1% Author **Experimental Determination of Gas Properties at High Temperatures And/or Pressures** C. Temperature Dependence of Gas Properties in Polynomial Form J. R. Andrews, 1981 Based on a least squares polynomial approximation a procedure is introduced for calculating existing tabular values of thermodynamic and transport properties for common gases The specific heat at constant pressure is given for 238 gases the thermal conductivity for 55 gases the dynamic viscosity for 58 gases and the second and third virial coefficients for 14 gases At sufficiently low pressures ideal gas behavior prevails and temperature may be used as the single independent variable The algorithm for nested multiplication is presented optimized for hand held or desktop electronic calculators Using the polynomial approximations and a suitable calculator it is possible to duplicate existing reference source tabular values directly obviating the need for interpolation or further reference to the tables per se The accuracy of the calculated values can be within 0.5% of the tabular values The polynomial coefficients are given in the International System of Units SI Methods are presented to calculate the temperature corresponding to a given property value Extrapolation features of the polynomials are discussed Author **Teaching the Gas Properties and Gas Laws** Michael T. Hammar, 2013 As a chemistry teacher I felt that the gas laws were rather simple concepts to understand My students however felt the opposite Conceptual issues as well as mathematical issues were problematic every year In this study a unit about gas properties and gas laws was modified to include inquiry based teaching methods The research questions focused on how these changes affected student results on a traditional end of the unit test and on an alternative assessment Students attitudes during these lessons were also monitored to see if the inquiry methods improved student perceptions of teaching learning and self awareness The results of this study showed that an inquiry approach improved the student's ability to perform on a traditional end of the unit test in the areas of microscopic

understanding atomic level symbolic understanding mathematical level and graphical understanding relationships between pressure volume and temperature It was also shown to have a positive effect on the students confidence and attitude towards the material presented when inquiry was utilized On the other hand the revised unit did not improve the students overall performance on an alternative assessment geared towards the concept of pressure but showed some improvement in two specific areas a students understanding that pressure is created by molecules and their movement and b students understanding that when pressure is equalized little happens within a system
