Gopalakrishnan Ravichandran, Prof. Seeram Ramakrishna, 2021-12-15 Climate change is a hot topic these days as it makes our earth a hotter place to live in. Almost all the countries are working on their climate policy to do their part in reducing carbon emissions. Many global conferences and events have been happened in the past 50 years to control the global temperature rise. But still there is no evidence of significant improvement in reducing our global carbon emissions. Some of you might have thought about your role in combating climate change. To answer this we came up with this book which will help you to understand your carbon footprint and the possible ways to reduce the same. We have covered some of the products, events and activities in this book with which you can find the carbon footprint of the products which aren't covered in this book.

*Development with Sustainable Use of Electricity* Jørgen S. Nørgård, Adam Gula, A. de Almeida, 2012-12-06 The rather young field of research into electricity savings is attracting increasing attention since low electricity consumption is a vital component of environmentally sustainable development The potential benefits from using less electricity without sacrificing quality of life are immense as the book shows with case studies from Eastern and Western Europe and the USA Saving electricity means that the expense of constructing scores of power plants can be saved and that their economic and environmental impact will vanish Audience Can be read with profit by any graduate Suitable as a reference work for Master's and Doctoral students as well as for others working on environmental issues in general and electricity savings in particular
