During such periods, individuals may feel threatened and respond with denial, blocking out information that suggests their roles or the organization may be at risk. This resistance can proliferate at various organizational levels, leading to misinformation and, in some cases, outright sabotage of change efforts. For example, when an organization announces a restructuring process, employees may downplay or deny their involvement or the necessity for changes, thereby complicating the execution and acceptance of the initiative. Projection can further complicate these dynamics. In times of uncertainty, team members may unconsciously project their anxiety and fears onto their colleagues, fostering distrust or competition rather than collaboration. For instance, if a project manager feels insecure about their leadership capabilities, they might project this insecurity onto their team, questioning their commitment or competence. Such behaviors not only strain working relationships but also distract from the shared goals and objectives that are crucial for organizational success. The intertwining of denial and projection can also obscure the development of a healthy feedback culture. In an environment where negative feedback is

met with denial or hardship employees may refrain from voicing concerns or suggestions When feedback loops are stymied opportunities for learning and improvement are lost further entrenching inefficiencies A leader who cannot accept constructive criticism may inadvertently cultivate a culture where team members fear reprisal for expressing dissenting views
