**South Africa's Post-Apartheid Military** Lindy Heineken, 2020-01-01 This timely book examines how the South African National Defence Force has adapted to the country's new security political and social environment since 1994. In South Africa's changed political state, how has civilian control of the military been implemented and what does this mean for defence in a democracy? This book presents an overview of the security environment, how the mission focus of the military has changed and the implications for force procurement, force preparation, force employment and force sustainability. The author addresses other issues such as the effect of integrating former revolutionary soldiers into a professional armed force, the effect of affirmative action on meritocracy, recruitment and retention of military veterans, looking at the difficulties they face in reintegrating back into society and finding gainful employment, gender equality and mainstreaming the rise of military unions and why a confrontational instead of a more corporatist approach to labour relations has emerged. HIV/AIDS and the consequences this holds for the military in terms of its operational effectiveness. In closing, the author highlights key events that have caused the SANDF to become lost in transition and transformation, spelling out some lessons learned. The conclusions she draws are pertinent for the future of defence security and civil-military relations of countries around the world.

**SADC Gender Protocol 2015 Barometer** Morna, Colleen Lowe, Dube, Sifiso, 2016-02-22 In August 2008 Heads of State of the Southern African Development Community adopted the ground-breaking SADC Protocol on Gender and Development. This followed a concerted campaign by NGOs under the umbrella of the Southern Africa Gender Protocol Alliance. The SADC Gender Protocol is the only sub-regional instrument that brings together existing global and continental commitments to gender equality and enhances these through time-bound targets. Aligned to Millennium Development Goal Three, the original 28 targets of the Protocol expire in 2015. Now that 2015 is here, we need to step back, assess and reposition. In June 2014 SADC Gender Ministers agreed to review the targets of the Gender Protocol in line with the Sustainable Development Goals (SDGs). In May this year, ministers added that they want the Protocol to be accompanied by a Monitoring, Evaluation and Results Framework. The 2015 Barometer shows that implementation is now the biggest missing gap in the quest for gender equality. Now is the time to strengthen, resolve, reconsider, reposition and re-strategise for 2030.

Zeng,Sansar Raj Meena, Jiawei Xie,2025-08-26 Natural disasters which include landslides rock falls rainstorms floods and earthquakes appear as results of the progressive or extreme evolution of climatic tectonic and geomorphological processes and human engineering activities It is significant to explore the failure mechanism and carry out spatial modeling of these natural disasters due to their serious harm to the safety of people s lives and property Various advanced methods including successful remote sensing geographic information systems machine learning models and numerical simulation techniques are promising tools to analyze these complex disasters Machine Learning models such as neuro fuzzy logic decision trees artificial neural networks deep learning and evolutionary algorithms are characterized by their abilities to produce knowledge and discover hidden and unknown patterns and trends from large databases whereas remote sensing and Geographic Information Systems appear as significant technology equipped with tools for data manipulation and advanced mathematical modeling What is more numerical simulation can also be acknowledged as an advanced technology for

discovering hidden failure mechanisms of disasters      Physico-Mechanical Properties and Treatment Technology of Hazardous Geomaterials, volume II Xianze Cui, Bing Bai, Wenbin Fei, 2023-12-22 This Research Topic is Volume II of a series. The previous volume can be found [here](#). Physico-Mechanical Properties and Treatment Technology of Hazardous Geomaterials. New materials and technologies are emerging in every branch of geotechnical engineering, such as high speed railway subgrade soil improvement and remediation, underground space structure, ground energy storage, energy pile, energy geostructure, energy tunnel, tunnel waterproof engineering and marine engineering. In addition to the common infrastructure construction materials, it also includes the treatment of hazardous geomaterials, resource utilization of industrial wastes, geopolymer materials, contaminated soils related to geoenvironmental engineering as well as other newly developed materials. In recent years, the advancement of new materials has promoted the development of geotechnical engineering and its close intersection with other disciplines. Scholars have done fruitful work, but the understanding of many new materials is not very clear. Moreover, the external environment, e.g., heat, water, external force borne by various materials, is becoming more and more complex. The newly developed geotechnical materials involve the coupling actions of multiple fields, such as physics, mechanics, chemistry, and even biology. Some new technologies and specifications are still developing. For this purpose, it is necessary to investigate the mineral composition and micro structures, physico-mechanical properties, deformation and strength evolution process, and constitutive characteristics of various geotechnical materials. The research methods include theoretical description, numerical simulation, laboratory experiments, and field tests. The Research Topic aims to bring together Original Research and Review articles on the recent developments in natural geotechnical material improvement, hazardous geomaterials, synthetic materials, geopolymer, energy geotechnical materials, and contaminated soil treatment.

*Geotechnical Engineering Challenges to Meet Current and Emerging Needs of Society* Nuno Guerra, Manuel Matos Fernandes, Cristiana Ferreira, António Gomes Correia, Alexandre Pinto, Pedro Sêco Pinto, 2024-09-17 Geotechnical Engineering Challenges to Meet Current and Emerging Needs of Society includes the papers presented at the XVIII European Conference on Soil Mechanics and Geotechnical Engineering, Lisbon, Portugal, August 26 to 30th 2024. The papers aim to contribute to a better understanding of problems and solutions of geotechnical nature as well as to a more adequate management of natural resources. Case studies are included to better disseminate the success and failure of Geotechnical Engineering practice. The peer-reviewed articles of these proceedings address the six main topics: New developments on structural design, Geohazards, Risk analysis and safety evaluation, Current and new construction methods, Environment, water and energy, Future city world vision. With contributions from academic researchers and industry practitioners from Europe and abroad, this collection of conference articles features an interesting and wide-ranging combination of innovation, emerging technologies, and case histories and will be of interest to academics and professionals in Soil Mechanics and Geotechnical Engineering.      **Asphalt Core Embankment Dams** Kaare Høeg, Weibiao Wang, 2025-06-20 Dams are built for several purposes, e.g., water supply

irrigation hydropower production or flood control The main categories are concrete dams and embankment dams but inside each of these two main general categories there are several different types Asphalt Core Embankment Dams focusses on the design and construction of these types of dams Asphalt core embankment dams are gaining in popularity as their recorded field performance is excellent they are economically very competitive and the construction period may be shortened compared to other types of embankment dams This book presents several case studies of dams that have been successfully built and been in service for many years and introduces the concept of using asphalt concrete core rather than earth core or upstream facing points out there is no concern about internal erosion when using hydraulic asphalt concrete in the core discusses material selection and mix design for hydraulic asphalt concrete to achieve flexibility and ductility discusses suitability testing and asphalt concrete mix improvements and optimization by using additives presents the use of triaxial tests tension tests and bending tests to study cracking resistance and potential self healing discusses the use of modern construction equipment and field quality control shows that asphalt core dams may reduce the construction period compared to other options and treats earthquake resistance of this type of dams The authors have built on decades of experience with the design and construction construction control and research and development for asphalt core embankment dams Asphalt Core Embankment Dams is aimed at engineering students practising engineers civil engineering contractors equipment suppliers and asphalt producers
