**Advanced Materials and Techniques for Structural Monitoring, Analysis and Control** Chun-Xu Qu,Liang Ren,Yunlai Zhou,Sadegh Shams ,Qian Feng,2024-06-18 Assessing the service status and maintaining the safety of existing structures are critical to the sustainable operations of various engineering and cross industry including civil infrastructures railways and machinery Static and dynamic structural characteristics play a key role in the global deterioration assessment of the structural performance which has enabled structural monitoring and analysis technology to become an active focus in the engineering area Meanwhile structural control has been widely used in modern structural engineering Structural control devices are implemented to enhance deteriorating structures and mitigate natural disasters Through advanced structural control technology the structural responses can be controlled These structural control techniques include passive active or semi active reverse forces which aim to modify structural stiffness mass and damping with minimal control force Structural control monitoring and analysis complement each other ensuring the safety of the structure to the greatest extent

*Pipeline Inspection and Health Monitoring Technology* Hongfang Lu,Zhao-Dong Xu,Tom Iseley,Haoyan Peng,Lingdi Fu,2023-01-03 This book includes six chapters aiming to introduce global pipeline inspection and health monitoring technologies comprehensively The pipeline is the blood vessel of the energy system and a vital lifeline project After many years of service the pipeline gradually enters the aging stage Pipeline inspection and health monitoring can effectively reduce the failure and accident risks of the pipeline and it is conducive to integrity management Through case analysis practitioners can have a deeper understanding of the application of related technologies *Advances in Environmental Vibration and Transportation Geodynamics II* Tatsuya Ishikawa, *Spatial Modelling and Failure Analysis of Natural and Engineering Disasters through Data-Based Methods,volume III* Faming Huang,Jingjing Meng,Sansar Raj Meena,2024-09-12 This Research Topic is Volume III of a series The previous volume can be found here *Spatial Modelling and Failure Analysis of Natural and Engineering Disasters through Data based Methods Volume II* and *Spatial Modelling and Failure Analysis of Natural and Engineering Disasters through Data based Methods* Natural and engineering disasters which include landslides rock fall rainstorm dam failure floods earthquakes road and building disasters and wildfires appear as results of the progressive or extreme evolution of climatic tectonic and geomorphological processes and human engineering activities It is significant to explore the failure mechanism and carry out spatial modeling of these engineering and natural disasters due to their serious harm to the safety of people s lives and property The data based methods including advanced and successful remote sensing geographic information systems machine learning and numerical simulation techniques methods are promising tools to analyze these complex disasters Machine Learning models such as neurofuzzy logic decision tree artificial neural network deep learning and evolutionary algorithms are characterized by their abilities to produce knowledge and discover hidden and unknown patterns and trends from large databases whereas remote sensing and Geographic Information

Systems appear as significant technology equipped with tools for data manipulation and advanced mathematical modeling. What is more, the numerical simulation can also be acknowledged as advanced technologies for discovering hidden failure mechanism of disasters. The main objective of this Research Topic is to provide a scientific forum for advancing the successful implementation of Machine Learning ML and numerical simulation techniques in operation rules failure mechanism spatial and time series prediction susceptibility mapping hazard assessment vulnerability modeling risk assessment and early warning of complex natural and engineering disasters.

**Geological Disasters in Deep Engineering Mechanism, Warning and Risk mitigation** Guang-Liang Feng, Fengqiang Gong, Chi Zhang, Shibing Huang, 2023-06-15

With the increasing demand for infrastructure construction as the global economy progresses, the need for exploration and utilization of deep underground space becomes more crucial. Various deep underground projects are planned, are under construction, and have been built to encounter great construction challenges due to the complex geo environment such as strong tectonic movement, fragile geo environment, and complex thermo hydro mechanical chemical conditions. These deep engineering projects could be endangered by different kinds of geological disasters such as intense rockburst, large deformation, strong water inrush, and large scale collapse, which might result in massive loss of life and economic damage during the construction of deep underground projects. It is necessary to take proactive measures to ensure that the development of deep engineering projects is risk informed and sustainable. Efforts are being called for strengthening science and technology innovation and cooperation in geological disaster mitigation and sustainable development during the construction of deep engineering projects. It is paramount to use new technologies and international cooperation to jointly tackle the geological disasters risks and achieve sustainable development. To mitigate the risk of geological disaster in deep engineering under the complicate geo environment, the mechanism of the formation and evolution of geological disasters in deep engineering needs to be understood. The testing, monitoring, simulation, risk assessment, and early warning methods for geological disaster in deep engineering are also needed urgently. New theories, methods, and techniques related to the mechanism, warning, and risk mitigation of geological disasters in deep engineering will be extremely helpful for the construction safety of deep engineering.
