**Psychological Assessment in South Africa** Sumaya Laher, Kate Cockcroft, 2013-01-01 This book provides an overview of the research related to psychological assessment across South Africa. The thirty six chapters provide a combination of psychometric theory and practical assessment applications in order to combine the currently disparate research that has been conducted locally in this field. Existing South African texts on psychological assessment are predominantly academic textbooks that explain psychometric theory and provide brief descriptions of a few testing instruments. *Psychological Assessment in South Africa* provides in depth coverage of a range of areas within the broad field of psychological assessment including research conducted with various psychological instruments. The chapters critically interrogate the current Eurocentric and Western cultural hegemonic practices that dominate the field of psychological assessment. The book therefore has the potential to function both as an academic text for graduate students as well as a specialist resource for professionals including psychologists, psychometrists, remedial teachers and human resource practitioners.

**Handbook of Gender Research in Psychology** Joan C. Chrisler, Donald R. McCreary, 2010-03-12 Donald R McCreary and Joan C Chrisler. The Development of Gender Studies in Psychology. Studies of sex differences are as old as the eld of psychology and they have been conducted in every sub eld of the discipline. There are probably many reasons for the popularity of these studies but three reasons seem to be most prominent. First, social psychological studies of person perception show that sex is especially salient in social groups. It is the rst thing people notice about others and it is one of the things we remember best. Fiske, Haslam, Stangor, Lynch, Duan, Glass, 1992. For example, people may not remember who uttered a witty remark but they are likely to remember whether the quip came from a woman or a man. Second, many people hold rm beliefs that aspects of physiology suit men and women for particular social roles. Men's greater upper body strength makes them better candidates for manual labor and their greater height gives the impression that they would make good leaders i.e. people we look up to. Women's reproductive capacity and the caretaking tasks e.g. breastfeeding, baby minding that accompany it make them seem suitable for other roles that require gentleness and nurturance. Third, the logic that underlies hypothesis testing in the sciences is focused on difference. Researchers design their studies with the hope that they can reject the null hypothesis that experimental groups do not differ.

**South Africa's Post-Apartheid Military** Lindy Heineken, 2020-01-01 This timely book examines how the South African National Defence Force has adapted to the country's new security, political and social environment since 1994. In South Africa's changed political state, how has civilian control of the military been implemented and what does this mean for defence in a democracy?
