*Developing a Framework for Supply Chain Planning in Construction* Micael Thunberg, 2016-09-28 Supply chain management SCM has been stressed as a remedy to many of the underlying issues in the construction industry However the positive examples where SCM has been successfully utilised and diminished the lingering issues in construction is scarce The question is why Previous studies have stressed the importance of planning both the construction project as such but also the supply chain and the logistics As an important part of SCM supply chain planning SCP focuses on planning different aspects of the supply chain through involving different members of the supply chain in the planning process SCP in construction is scarce as the planning of the logistics in general Failing to plan the supply chain involving supply chain members in the planning and integrating the processes of planning the supply chains and the construction project can be one reason for the low numbers of successful SCM adoption in construction In improving the SCP in construction this thesis develops a SCP framework for construction that involves the main contractor subcontractors and

suppliers The aim is to improve SCP collaboration and eliminate many of the common problems in construction through a SCM and SCP perspective The developed framework is based on an existing planning framework for sales and operations planning This framework is generic and synthesises planning in general It consists of identifying developing outcomes input organisation process key performance measurements and IT tools It is thus necessary to investigate what these aspects means in a construction context Four research objects will be fulfilled Objective 1 Identify common logistical problems and linkages between them Objective 2 Develop a SCP process Objective 3 Develop a SCP organisation Objective 4 Identify performance measurements

*A Handbook for Construction Project Planning and Scheduling* Virendra Kumar Paul, Chaitali Basu, 2018-02-07 The development of IS 15883 Part 2 2009 Construction Time Management Guidelines is an important milestone in formally recognizing the threshold framework for the construction industry This initiative of Bureau of Indian Standards BIS provides for a national framework for time management which specifically focuses on unique aspects of Indian construction industry This handbook supplements the BIS framework enshrined in IS 15883 Part 2 and thereby facilitating capacity building for widespread application of the Guidelines The chapters of handbook follow the stages of a typical project life cycle of a construction project flowing seamlessly from project inception through to project closure In addition latest trends in the construction sector in terms of tools techniques and software have also been elaborated It is implied that time management operates in conjunction with other interdependent processes of project management and might need multi dimensional decision making To that extent this handbook does elaborate the relevant interface that maybe critical for comprehensive project management approach As a primary expectation the handbook would serve as a supplementary textbook for students of architecture and civil engineering who are pursuing subjects in construction management It is also an effortless reference for new entrants to the field of project management and other management professionals as well who seek a quick reference to the tools and techniques of time management illustrated through examples in easy language

*Lean Construction 4.0* Vicente A. González, Farook Hamzeh, Luis Fernando Alarcón, 2022-12-30

This book introduces and develops the novel concept of Lean Construction 4.0. The capability of Lean Construction to effectively adapt the architecture, engineering, construction (AEC) industry to this new era of digital transformation requires a reconceptualization of the triad: people, processes, technology, as a foundation for the theoretical and practical framework of Lean Construction. Therefore, a shift towards Lean Construction 4.0 is required. Lean Construction 4.0 is a new, systems-wide thinking approach where synergies and overlaps between Lean Construction and digital smart technologies go far beyond BIM to reshape the way we design, manage and operate capital projects in the modern age of automation. This pioneering new book brings together the views of world experts at the interface of Lean Construction and digital smart technologies in order to channel research efforts to introduce and discuss current research and practice challenges and drivers and future perspectives of Lean Construction 4.0. It is not the aim of the book to keep adding digits to the term Lean Construction to catch up with the industry revolutions as they go on. Instead, after reading this book, it will be undeniable for readers that the triad: process, people, technology, as proposed by Lean Construction 4.0, is required to achieve an effective, long-lasting digital transformation of the AEC industry. Thus, the aim of Lean Construction 4.0 is better explained by what it evokes: a future vision of construction systems comprising people, processes, and technology, using Industry 4.0/5.0 as a basis for technological innovation in the AEC industry, coupled with Lean Construction theory and practice, as a jettison

for improved processes and systems integration The Lean Construction 4.0 concept coined and developed in this edited book is unique and the chapters provide practitioners and academics with a provocative reflection on the theoretical and practical aspects that shape the Lean Construction 4.0 concept More importantly Lean Construction 4.0 proposes a rationale for the AEC industry not only to survive but to thrive
