

16:9

Shorthand for the ratio of the dimensions (also known as "aspect ratio") of a wide-screen TV. While most TVs sport square screens, newer ones look like theater screens—they're 16 units across and 9 units high. DVDs and HDTV broadcasts are formatted for this 16:9 aspect ratio. In fact, the shape is part of the U.S. standard for all HDTV broadcasts. (See WIDE-SCREEN.)

4:3

Shorthand for the ratio of the dimensions (also known as "aspect ratio") of a traditional TV set. This square shape works fine for broadcasts, but it's not wide enough to handle big-screen movies. To show these on an old-fashioned TV, the filmmakers have to lop off 25 percent from the left or right edge, or resort to the letterbox format, which involves blacking out a strip at the top and bottom of the TV screen to preserve the entire movie image. (See LETTERBOX.)

5.1

The number of channels used to create one kind of surround sound—often synonymous with Dolby® Digital technology though, there are other formats (i.e., DTS®). Instead of two speakers, 5.1 uses five speakers and a subwoofer—audio engineers insist on the ".1" because a booming subwoofer can only issue a narrow range of bass tones. (See DOLBY® DIGITAL TECHNOLOGY and SURROUND SOUND.)

5C

A copy protection technology for films and television content, named to designate the five companies that founded it: Hitachi, Intel, Panasonic, Sony, and Toshiba. The 5C's Digital Transmission Content Protection System (DTCP) scrambles the image data so that unlicensed copies cannot be made, and uses the first all-digital connection for video equipment, i.LINK® interface.

8-VSB

The transmission standard for digital television in the U.S., endorsed by the Federal Communications Commission in 2001. The letters indicate that it is the number 8 mode of vestigial sideband modulation. All receivers made in the U.S. are 8-VSB compatible.

AC-3®

The technical name for Dolby® Digital technology. The "AC" stands for Audio Code and the "3" means version 3. (See DOLBY® DIGITAL TECHNOLOGY.)

A/V inputs

Often used to quickly connect a DVD player, videogame console, or camcorder, these three connectors can be seen on the back or front of almost every TV: one for video (yellow) and two for stereo audio (either red and black or red and white). The yellow plug is called "composite video."

active scan lines

The tiny rows of pixels on a television screen. (Any inactive scan lines are involved with helping the television keep its internal timing.) You can see the active scan lines if you look closely with a magnifying glass; there are 480 lines on a typical analog NTSC TV screen; a Hi-Scan® screen has 1,080 lines. The number of active scan lines provides a good initial test for a screen's clarity, called its "native resolution."
