Geology and Archaeology J. Harff,G. Bailey ,F. Lüth ,2016-01-05 Sea level change has influenced human population globally since prehistoric times Even in early phases of cultural development human populations were faced with marine regression and transgression as a result of changing climate and corresponding glacio isostatic adjustment Global marine regression during the last glaciation changed the palaeogeography of the continental shelf converting former marine environments to attractive terrestrial habitats for prehistoric humans These areas of the shelf were used as hunting and gathering areas as migration routes between continents and most probably witnessed the earliest developments in seafaring and marine exploitation until the postglacial transgression re submerged these palaeo landscapes Based on modern marine research technologies and the integration of large databases proxy data are increasingly available for the reconstruction of Quaternary submerged landscapes Also prehistoric archaeological remains from the recent sea bottom are shedding new light on human prehistoric development driven by rapidly changing climate and environment This publication contributes to the exchange of ideas and new results in this young and challenging field of underwater palaeoenvironmental investigation

Becerro,Maria Jesús Uriz,2015-03-21 This book summarizes the latest advances in sponge science through a concise selection of studies presented at the VIII World Sponge Conference The collection of articles reflects hot ongoing debates in molecular research such as the monophyletic versus paraphyletic nature of the sponge group or the new awareness on pros and cons of standard barcodes and other markers in sponge taxonomy and phylogeny It also features articles showing how the new sequencing technologies reveal the functional and phylogenetic complexity of the microbial universe associated to sponge tissues The ecological interactions of sponges the effects of nutrients and pollutants the variability in reproductive patterns and the processes generating genotypic and phenotypic variability in sponge populations are covered in several contributions Zoogeography population structure and dynamics are

also approached with both traditional and molecular tools The effect of anthropogenic disturbance on the natural environment finds its place in this volume with papers dealing with metal accumulation and the potential role of sponges as biomonitors Biodiversity data from unexplored tropical and deep sea areas are presented We hope readers will enjoy the selection of papers which we believe represent collectively a significant contribution to our current understanding of sponges Previously published in *Hydrobiologia* vol 687 2012 *How Enemies Shape Communication Systems: Sensory Strategies of Prey to Avoid Eavesdropping Predators and Parasites* Ximena E.
