Eurocode-Compliant Seismic Analysis and Design of R/C Buildings Ioannis Avramidis, A.

Athanatopoulou, Konstantinos Morfidis, Anastasios Sextos, Agathoklis Giaralis, 2015-11-18 This book aims to serve as an essential reference to facilitate civil engineers involved in the design of new conventional ordinary reinforced concrete R C buildings regulated by the current European EC8 EN 1998 1 2004 and EC2 EN 1992 1 1 2004 codes of practice. The book provides unique step by step flowcharts which take the reader through all the required operations, calculations and verification checks prescribed by the EC8 provisions. These flowcharts are complemented by comprehensive discussions and practical explanatory comments on critical aspects of the EC8 code regulated procedure for the earthquake resistant design of R C buildings. Further detailed analysis and design examples of typical multi storey three dimensional R C buildings are included to illustrate the required steps for achieving designs of real life structures which comply with the current EC8 provisions. These examples can be readily used as verification tutorials to check the reliability of custom made computer programs and of commercial Finite Element software developed used for the design of earthquake resistant R C buildings complying with the EC8 EN 1998 1 2004 code. This book will be of interest to practitioners working in consulting and designing engineering companies and to advanced undergraduate and postgraduate level civil engineering students attending courses and curricula in the earthquake resistant design of structures and or undertaking pertinent design projects.

Mega Quakes: Cascading Earthquake Hazards and Compounding Risks Katsuichiro Goda, Tiziana Rossetto, Nobuhito Mori, Solomon Tesfamariam, 2018-03-15 Large scale earthquake hazards pose major threats to modern society, generating casualties, disrupting socioeconomic activities and causing enormous economic loss across the world. Events such as the 2004 Indian Ocean tsunami and the 2011 Tohoku earthquake highlighted the vulnerability of urban cities to catastrophic earthquakes. Accurate assessment of earthquake related hazards, both primary and secondary, is essential to mitigate and control disaster risk exposure effectively. To date, various approaches and tools have been developed in different disciplines. However, they are fragmented over a number of research disciplines and underlying assumptions are often inconsistent. Our society and infrastructure are subjected to multiple types of cascading earthquake hazards; therefore, integrated hazard assessment and risk management strategy is needed for mitigating potential consequences due to multi hazards. Moreover, uncertainty modeling and its impact on hazard prediction and anticipated consequences are essential parts of probabilistic earthquake hazard and risk assessment. The Research Topic is focused upon modeling and impact assessment of cascading earthquake hazards, including mainshock, ground shaking, aftershock, tsunami, liquefaction and landslide.
