detection of ultra low levels of microbial ATP in seawater The newly developed ATP based BGP method was applied to monitor and assess the pre treatment of five full scale seawater desalination plants around the world A good correlation was observed between BGP measured in SWRO feed water and the pressure drop increase in the SWRO systems suggesting the applicability of using the ATP based BGP method as a biofouling indicator in SWRO Furthermore a safe level of BGP In the future on line monitoring of BGP in SWRO feed water may further reduce the consumption of chemicals and energy and improve the overall sustainability of seawater desalination by reverse osmosis
