Seakeeping A. R. J. M. Lloyd, 1989      *Seakeeping* A. R. Lloyd, 1989-01-01 An examination of all aspects of the behaviour of ships in rough weather designed as a reference work for those involved in ship building and the design of seagoing vessels The text will also be of interest to sailors and engineers concerned with the action of waves and the sea      **Ship Resistance**

**and Propulsion** Anthony F. Molland, Stephen R. Turnock, Dominic A. Hudson, 2017-08-17 This updated edition provides a modern scientific approach to evaluating ship resistance and propulsion for a range of ship types      Parametric Resonance

in Dynamical Systems Thor I. Fossen, Henk Nijmeijer, 2011-12-14 Parametric Resonance in Dynamical Systems discusses the phenomenon of parametric resonance and its occurrence in mechanical systems vehicles motorcycles aircraft and marine craft along micro electro mechanical systems The contributors provides an introduction to the root causes of this

phenomenon and its mathematical equivalent the Mathieu Hill equation Also included is a discussion of how parametric resonance occurs on ships and offshore systems and its frequency in mechanical and electrical systems This volume is ideal for researchers and mechanical engineers working in application fields such as MEMS maritime aircraft and ground vehicle engineering      *Basic Ship Theory Volume 2* E. C. Tupper, KJ Rawson, 2001-10-05 Rawson and Tupper s Basic Ship Theory

first published in 1968 is widely known as the standard introductory text for naval architecture students as well as being a useful reference for the more experienced designer The fifth edition continues to provide a balance between theory and practice Volume 2 expands on the material in Volume 1 covering the dynamics behaviour of marine vehicles hydrodynamics manoeuvrability and seakeeping It concludes with some case studies of particular ship types and a discussion of maritime design Both volumes feature the importance of considering the environment in design Basic Ship Theory is an essential tool for undergraduates and national vocational students of naval architecture maritime studies ocean and offshore engineering and will be of great assistance to practising marine engineers and naval architects Brand new edition of the leading undergraduate textbook in Naval Architecture Provides a basis for more advanced theory Over 500 examples with answers

*Practical Design of Ships and Other Floating Structures* You-Sheng Wu, Guo-Jun Zhou, Wei-Cheng Cui, 2001-08-22 This proceedings contains the papers presented at The 8th International Symposium on Practical Design of Ships and Other Floating Structures held in China in September 2001 the first PRADS of the 21st Century The overall aim of PRADS symposia is to advance the design of ships and other floating structures as a professional discipline and science by exchanging knowledge and promoting discussion of relevant topics in the fields of naval architecture and marine and offshore engineering In line with the aim in welcoming the new era this Symposium is intended to increase international co operation and give a momentum for the new development of design and production technology of ships and other floating structures for efficiency economy safety and environmental production The main themes of this Symposium are Design Synthesis Production Hydrodynamics Structures and Materials of Ships and Floating Systems Proposals for over 270 papers from 26

countries and regions within the themes were received for PRADS 2001 and about 170 papers were accepted for presentation at the symposium With the high quality of the proposed papers the Local Organising Committee had a difficult task to make a balanced selection and to control the total number of papers for fitting into the allocated time schedule approved by the Standing Committee of PRADS Volume I covers design synthesis production and part of hydrodynamics Volume II contains the rest of hydrodynamics and structures and materials Ship Motion Control Tristan Perez,2006-03-30 engineers into a single volume whilst concentrating on two important research control design problems autopilots with rudder roll stabilization and fin and combined rudder fin stabilization He has been guided by some of the leading marine control academics in particular Mogens Blanke and Thor Fossen indeed Chapters 3 and 4 on kinematics and kinetics of ship motion are jointly authored with Professor Fossen There are some 240 cited references an invaluable resource for interested readers The volume is likely to appeal to a wide range of readers who will each be able to extract something different from the various parts of the monograph Part I has some four chapters on the modelling fundamentals including kinematics dynamics and actuators Part II is a very useful survey of the ship roll stabilization problem and how ship roll performance is measured and assessed This clearly motivates the human necessity for roll reduction and roll stabilization Parts III and IV move on to the control systems aspects of the various stabilization designs Valuable material here includes a study of system performance limitations as caused by the presence of non minimum phase characteristics and actuator saturation Chapter 10 has an interesting historical review of these marine control problems stretching back some thirty years into the 1970s
