

Chapter II

Wind and Current Load Prediction Procedures

2.1 BASIS OF PROCEDURES

Environmental loads induced on VLCCs (vessels in the 150,000 to 500,000 DWT range) by wind and current can be computed with the procedures described in this section. The forces and moments generated are suitable for a computer analysis of the required mooring restraint. The following non-dimensional coefficients are used throughout in the calculation of design loads:

C_x = longitudinal force coefficient

C_y = lateral force coefficient

C_{xy} = yaw moment coefficient

The subscripts *w* and *c* are used to distinguish between wind and current.

The sign convention and coordinate system adopted for this report are illustrated in Figure 1. The adopted sign convention is according to the ITTC¹ standards. This differs from the sign convention as published in the earlier 1977 OCIMF publication. The sign convention for the axis of coordinates in this publication refers to a stern-on direction of wind or current direction as 0 degrees. Curves of the force and moment coefficients as a function of wind and current angle of attack are provided in Figures 2 to 4 and Figures 5 to 14, respectively. The wind coefficients are based upon data obtained from wind tunnel tests conducted at the University of Michigan in the 1960's. The values of the current coefficients are based upon data from model tests performed at the Maritime Research Institute Netherlands (1975-1991) and for the deep water case ($W/D > 6$) the Design Manual of the United States Navy (ref. 2). The forces and moments computed will be in units of Newtons and Newton metres respectively with their point of action at the intersection of the transverse and longitudinal centre line of the tanker.

2.2 EQUATIONS FOR COMPUTING WIND LOADS

The resultant wind force and moments acting on a moored tanker are calculated using the following equations

$$F_{xw} = \frac{1}{2} C_{xw} \rho_w V_w^2 A_{xw}$$

$$F_{yw} = \frac{1}{2} C_{yw} \rho_w V_w^2 A_{Lw}$$

(1)

$$M_{xw} = \frac{1}{2} C_{xw} \rho_w V_w^2 A_{Lw} L_{wp}$$

Note: The equations remain basically the same as provided in the 1977 edition.
