

## Chapter 1

### Chapter 1 Project Worksheet 1 (p. 6)

Students' data tables and graphs will vary somewhat. In general, eggs will increase in size when they soak in vinegar and plain water, and they will decrease in size when they soak in liquids that have a lower concentration of water, such as salt water.

### Chapter 1 Project Worksheet 2 (p. 7)

Column 4 in the table should read: 70 percent (liquid A); 92 percent (liquid B); 87 percent (liquid C); 79 percent (liquid D)

1. Liquids A and D would cause the cell to lose water; liquids B and C would cause the cell to take in water.
2. Possible answers might include shampoo, syrup, ketchup, or honey.

### Section 1-1 Review and Reinforce (p. 11)

1. Hooke
2. First person to observe bacteria
3. Schleiden

6. Magnification and resolution are both important properties of a microscope. Magnification is the ability to increase how large an object appears, whereas resolution is the ability to bring the details of the object into focus.
7. An electron microscope uses electrons instead of light to magnify an object, and it can view an object with much greater magnification and resolution than a light microscope.
8. Cells are the basic unit of structure and function in living things, and all living things are composed of cells.
9. b
10. e
11. d
12. c
13. a
14. g
15. f

### Section 1-1 Enrich (p. 12)

1. Transmission electron microscopes (TEM) and transmission positron microscopes (TPM) both use beams of atomic particles to view specimens. However, the TPM uses beams of positrons, which do not harm living things, whereas the TEM uses beams of electrons, which living things cannot withstand. Therefore, unlike the TEM, the TPM can be used to view living specimens.
2. Acoustic microscopes bounce high-frequency sound waves off an object. The echoes of the sound waves are then translated onto a screen as a microscopic image.
3. Transmission positron microscopes and acoustic microscopes can be used to view cells that are still alive and functioning. Electron microscopes, on the other hand, can be used to view only cells that are no longer alive.

Cognitive Development in Museum Settings David M. Sobel, Jennifer L. Jipson, 2015-10-30 Researchers in cognitive development are gaining new insights into the ways in which children learn about the world At the same time there has been increased recognition of the important role that visits to informal learning institutions plays in supporting learning Research and practice pursuits typically unfold independently and often with different goals and methods making it difficult to make meaningful connections between laboratory research in cognitive development and practices in informal education Recently groundbreaking partnerships between researchers and practitioners have resulted in innovative strategies for linking findings in cognitive development together with goals critical to museum practitioners such as exhibit evaluation and design Cognitive Development in Museum Settings offers an account of ways in which researchers in cognitive development partner with museum practitioners Each chapter describes a partnership between academic researchers and museum practitioners and details their collaboration the important research that has resulted from their partnership and the benefits and challenges of maintaining their relationship This approach illustrates cutting edge developmental science but also considers

how researcher practitioner interactions affect research outcomes and provide insight to questions common to practitioners  
In addition each set of researchers and practitioners discusses issues brought up by the partnership by posing questions concerning research practice partnerships and research evidence considering whether and how cognitive development research conducted in museum settings aligns with larger disciplinary interests in that field and examining to what extent museum practitioners benefit from applying research on the development of cognitive processes to their educational practices
