Biology Kenneth Raymond Miller, Prentice Hall (School Division), 1999-02 **An Introduction to Methods and Models in Ecology, Evolution, and Conservation Biology** Stanton Braude, Bobbi S. Low, 2010-01-04 An innovative introduction to ecology and evolution This unique textbook introduces undergraduate students to quantitative models and methods in ecology behavioral ecology evolutionary biology and conservation It explores the core concepts shared by these related fields using tools and practical skills such as experimental design generating phylogenies basic statistical inference and persuasive grant writing And contributors use examples from their own cutting edge research providing diverse views to engage students and broaden their understanding This is the only textbook on the subject featuring a collaborative active learning approach that emphasizes hands on learning Every chapter has exercises that enable students to work directly with the material at their own pace and in small groups Each problem includes data presented in a rich array of formats which students use to answer questions that illustrate patterns principles and methods Topics range from Hardy Weinberg equilibrium and population effective size to optimal foraging and indices of biodiversity The book also includes a comprehensive glossary In addition to the editors the contributors are James Beck Cawas Behram Engineer John Gaskin Luke Harmon Jon Hess Jason Kolbe Kenneth H Kozak Robert J Robertson Emily Silverman Beth Sparks Jackson and Anton Weisstein Provides experience with hypothesis testing experimental design and scientific reasoning Covers core quantitative models and methods in ecology behavioral ecology evolutionary biology and conservation Turns discussion sections into thinking labs Professors A supplementary Instructor s Manual is available for this book It is restricted to teachers using the text in courses For information on how to obtain a copy refer to http://press.princeton.edu/class_use/solutions.html *Biology* Joseph S. Levine, Kenneth Raymond Miller, Prentice-Hall Staff, 1998-05 **The Evaluation of Music Teaching and Learning** Richard Colwell, 1970 **Computational Psychometrics: New Methodologies for a New Generation of Digital Learning and Assessment** Alina A. von Davier, Robert J. Mislevy, Jiangang Hao, 2022-01-01 This book defines and describes a new discipline named computational psychometrics from the perspective of new methodologies for handling complex data from digital learning and assessment The editors and the contributing authors discuss how new technology drastically increases the possibilities for the design and administration of learning and assessment systems and how doing so significantly increases the variety velocity and volume of the resulting data Then they introduce methods and strategies to address the new challenges ranging from evidence identification and data modeling to the assessment and prediction of learners performance in complex settings as in collaborative tasks game simulation based tasks and multimodal learning and assessment tasks Computational psychometrics has thus been defined as a blend of theory based psychometrics and data driven approaches from machine learning artificial intelligence and data science All these together provide a better methodological framework for analysing complex data from digital learning and assessments The term computational has

been widely adopted by many other areas as with computational statistics computational linguistics and computational economics In those contexts computational has a meaning similar to the one proposed in this book a data driven and algorithm focused perspective on foundations and theoretical approaches established previously now extended and when necessary reconceived This interdisciplinarity is already a proven success in many disciplines from personalized medicine that uses computational statistics to personalized learning that uses well computational psychometrics We expect that this volume will be of interest not just within but beyond the psychometric community In this volume experts in psychometrics machine learning artificial intelligence data science and natural language processing illustrate their work showing how the interdisciplinary expertise of each researcher blends into a coherent methodological framework to deal with complex data from complex virtual interfaces In the chapters focusing on methodologies the authors use real data examples to demonstrate how to implement the new methods in practice The corresponding programming codes in R and Python have been included as snippets in the book and are also available in fuller form in the GitHub code repository that accompanies the book
