What happened to the Republican Party and America during the Trump presidency is a story we more or less think we know. What has happened to the party since it turns out is even more disquieting. That is the story Robert Draper tells in *Weapons of Mass Delusion*. Through his extraordinarily intrepid cross country reporting Draper chronicles the road from January 6 to the 2022 midterms among the Republican base and in the U S Congress rendering unforgettable portraits of how Marjorie Taylor Greene and her ilk came to shape their party's terms of engagement to an extent that would have been unimaginable even five years ago. He also brings to life the efforts of a dwindling group of Republicans who are willing to push back against the falsehoods in the face of a group of ascendent demagogues who are merrily weaponizing them. With a base whipped up into a perpetual frenzy of outrage by conspiracy theories not just about the big steal but about COVID and vaccines, pedophilia and Antifa and Black Lives Matter and George Soros and President Obama and on and on and on the forces of reason within the GOP are on the defensive to put it mildly. The book also benefits greatly from reporting conducted in Texas, Arizona, Georgia, New Hampshire and other bellwether states in the country of the mind one might call a fever of undending conspiracies. Robert Draper has been a wise, fearless and fair minded chronicler of the American political scene for over twenty five years. He has seen the good, the bad and the ugly. He has never seen it this ugly. Ultimately this book tells the story of a fearful test of our ability as a country to hold together a system of government grounded in truth and the rule of law. Written on the eve of the 2022 midterm elections, Draper's account of a party teetering on the precipice of madness reveals how the GOP fringe became its center of gravity.

The Landscapes of Science and Religion Nick Spencer, Hannah Waite, 2025-01-24. The relationship between science and religion has long been a heated debate and is becoming an ever more popular topic. The scientific capacity to manipulate and change humans and their environment through genetic engineering, life extension and AI is going to take a huge leap forward in the twenty first century provoking endless debates around humans playing God. But what do we mean by this? Asking this question is surprisingly hard work. Attempts to essentialise science let alone religion quickly run into trouble. Where are the boundaries? Whose definition of science is definitive? Which concept of religion is the authoritative one? Ultimately neither science nor religion can be pinned down to one single meaning or definition. Rather they encompass a family of definitions that relate to one another in a complex web of shifting ways. Drawing on extensive research with over a hundred leading thinkers in the UK including Martin Rees, Brian Cox, Susan Greenfield, A C Grayling, Ray Tallis, Linda Woodhead, Steve Bruce, Adam Rutherford, Robin Dunbar, Francesca Stavrakopoulou and Iain McGilchrist, *The Landscapes of Science and Religion* takes the much needed step of asking what science and religion actually are before turning to the familiar question of how they relate to one another. Building on this by paying particular attention to those who sense some form of conflict here, Spencer and Waite explore where the perceived conflict really lies. What exactly are people disagreeing about when they disagree about science and religion and what if anything can we do to improve that disagreement and bring about a fruitful dialogue between these two important human

The Transparent Society David Brin, 1999-05-07 In New York and Baltimore police cameras scan public areas twenty four hours a day Huge commercial databases track you finances and sell that information to anyone willing to pay Host sites on the World Wide Web record every page you view and smart toll roads know where you drive Every day new technology nibbles at our privacy Does that make you nervous David Brin is worried but not just about privacy He fears that society will overreact to these technologies by restricting the flow of information frantically enforcing a reign of secrecy Such measures he warns won't really preserve our privacy Governments the wealthy criminals and the techno elite will still find ways to watch us But we'll have fewer ways to watch them We'll lose the key to a free society accountability The Transparent Society is a call for reciprocal transparency If police cameras watch us shouldn't we be able to watch police stations If credit bureaus sell our data shouldn't we know who buys it Rather than cling to an illusion of anonymity a historical anomaly given our origins in close knit villages we should focus on guarding the most important forms of privacy and preserving mutual accountability The biggest threat to our freedom Brin warns is that surveillance technology will be used by too few people now by too many A society of glass houses may seem too fragile Fearing technology aided crime governments seek to restrict online anonymity fearing technology aided tyranny citizens call for encrypting all data Brin shows how contrary to both approaches windows offer us much better protection than walls after all the strongest deterrent against snooping has always been the fear of being spotted Furthermore Brin argues Western culture now encourages eccentricity we're programmed to rebel That gives our society a natural protection against error and wrong doing like a body's immune system But social T cells need openness to spot trouble and get the word out The Transparent Society is full of such provocative and far reaching analysis The inescapable rush of technology is forcing us to make new choices about how we want to live This daring book reminds us that an open society is more robust and flexible than one where secrecy reigns In an era of gnat sized cameras universal databases and clothes penetrating radar it will be more vital than ever for us to be able to watch the watchers With reciprocal transparency we can detect dangers early and expose wrong doers We can gauge the credibility of pundits and politicians We can share technological advances and news But all of these benefits depend on the free two way flow of information
