Practical Data Analysis in Chemistry Marcel Maeder, Yorck-Michael Neuhold, 2007-08-10 The majority of modern instruments are computerised and provide incredible amounts of data. Methods that take advantage of the flood of data are now available. Importantly they do not emulate graph paper analyses on the computer. Modern computational methods are able to give us insights into data but analysis or data fitting in chemistry requires the quantitative understanding of chemical processes. The results of this analysis allow the modelling and prediction of processes under new conditions therefore saving on extensive experimentation. Practical Data Analysis in Chemistry exemplifies every aspect of theory applicable to data analysis using a short program in a Matlab or Excel spreadsheet enabling the reader to study the programs, play with them and observe what happens. Suitable data are generated for each example in short routines, thus ensuring a clear understanding of the data structure. Chapter 2 includes a brief introduction to matrix algebra and its implementation in Matlab and Excel while Chapter 3 covers the theory required for the modelling of chemical processes. This is followed by an introduction to linear and non linear least squares fitting each demonstrated with typical applications. Finally Chapter 5 comprises a collection of several methods for model free data analyses. Includes a solid introduction to the simulation of equilibrium processes and the simulation of complex kinetic processes. Provides examples of routines that are easily adapted to the processes investigated by the reader. Model based analysis: linear and non linear regression and model free analysis are covered.

Spreadsheets for Chemists Gordon Filby, 1995 A practical guide. Spreadsheets for Chemists shows chemists of all levels how to use spreadsheet programs in their daily work. It highlights the possibilities provided by Lotus 1 2 3, the most widely used spreadsheet program in the sciences. Apart from hundreds of example fragments it features detailed discussion of the most relevant functions and all the macro commands. An accompanying diskette containing 57 worksheets involving many different fields of chemical research and teaching. An extensive glossary of spreadsheet terms. Three appendices covering 1 2 3 competitors and add in packages, the use of Windows based spreadsheets and how what if analysis and back solving is applied. Although the disk examples were developed for Lotus 1 2 3 DOS Versions 2.x.x 2.4 the worksheets are compatible with the newer Windows versions and

those of their main competitors Borland's Quattro Pro and Microsoft's Excel. Several compatible spreadsheets AsEasyAs Proqube might also be as used as inexpensive alternatives. The author is a senior scientist at the Nuclear Research Centre in Karlsruhe, Germany. He has been using spreadsheet software for nearly ten years successfully in a variety of chemical problems.

Applied Statistics for Engineers and Scientists David M. Levine, Patricia P. Ramsey, Robert K. Smidt, 2001

For courses in Probability and Statistics. This applied text for engineers and scientists written in a non-theoretical manner focuses on underlying principles that are important to students in a wide range of disciplines. It emphasizes the interpretation of results, the presentation and evaluation of assumptions, and the discussion of what should be done if the assumptions are violated. Integration of spreadsheet and statistical software Microsoft Excel and Minitab as well as in-depth coverage of quality and experimental design complete this treatment of statistics.
