

A line passes through the points $(-3, 6)$, and $(6, 0)$. Find the equation of this line in:

$$(x_1, y_1) \quad (x_2, y_2)$$

a) Point Slope Form

$$y - y_1 = m(x - x_1)$$

b) Slope Intercept Form

$$y = mx + b$$

c) Standard Form

$$Ax + By = C$$

$$\text{slope} = m = \frac{\Delta y}{\Delta x} = \frac{0 - 6}{6 - (-3)} = \frac{-6}{9} = -\frac{2}{3}$$

Point-Slope

$$y - 6 = -\frac{2}{3}(x - -3)$$

Education for America? Mark Wolfmeyer, 2013-12-04 Math Education for America analyzes math education policy through the social network of individuals and private and public organizations that influence it in the United States. The effort to standardize a national mathematics curriculum for public schools in the U.S. culminated in 2010 when over 40 states adopted the Common Core State Standards for Mathematics. Rather than looking at the text of specific policy documents, this book complements existing critical reviews of the national math education curriculum by employing a unique social network analysis. Breaking new ground in detailing and theorizing the politics of math education, Wolfmeyer argues that the private interests of this network are closely tied to a web of interrelated developments: human capital education policy debates over traditional and reform pedagogy, the assumed content knowledge deficit of math teachers, and the proliferation of profit-driven educational businesses. By establishing the interconnectedness of these interests with the national math education curriculum, he shows how the purported goals of math education reform are aligned with the prevailing political agendas of this social network rather than the national interest. *The Software Encyclopedia*, 1988

Bayesian Scientific Computing Daniela Calvetti, Erkki Somersalo, 2023-03-09 The once esoteric idea of embedding scientific computing into a probabilistic framework, mostly along the lines of the Bayesian paradigm, has recently enjoyed wide popularity and found its way into numerous applications. This book provides an insider's view of how to combine two mature fields: scientific computing and Bayesian inference into a powerful language leveraging the capabilities of both components for computational efficiency, high resolution power, and uncertainty quantification ability. The impact of Bayesian scientific computing has been particularly significant in the area of computational inverse problems where the data are often scarce or of low quality but some characteristics of the unknown solution may be available a priori. The ability to combine the flexibility of the Bayesian probabilistic framework with efficient numerical methods has contributed to the popularity of Bayesian inversion, with the prior distribution being the counterpart of classical regularization. However, the interplay between Bayesian inference and numerical analysis is much richer than providing an alternative way to regularize inverse problems, as demonstrated by the discussion of time-dependent problems, iterative methods, and sparsity-promoting priors in this book. The quantification of uncertainty in computed solutions and model predictions is another area where Bayesian scientific computing plays a critical role. This book demonstrates that Bayesian inference and scientific computing have much more in common than what one may expect and gradually builds a natural interface between these two areas. *NBS Special Publication*, 1918
