Bibliography and Index of Geology, 1975 **Biomineralization** Patricia M. Dove, James J. De Yoreo, Steve Weiner, 2018-12-17 Volume 54 of *Reviews in Mineralogy and Geochemistry* focuses upon the various processes by which organisms direct the formation of minerals. Our framework of examining biominerals from the viewpoints of major mineralization strategies distinguishes this volume from most previous reviews. The review begins by introducing the reader to overarching principles that are needed to investigate biomineralization phenomena and shows the current state of knowledge regarding the major approaches to mineralization that organisms have developed over the course of Earth history. By exploring the complexities that underlie the synthesis of biogenic materials and therefore the basis for how compositions and structures of biominerals are mediated or not, we believe this volume will be instrumental in propelling studies of biomineralization to a new level of research questions that are grounded in an understanding of the underlying biological phenomena.
