

## Chapter 1

### Chapter 1 Project Worksheet 1 (p. 6)

Students' data tables and graphs will vary somewhat. In general, eggs will increase in size when they soak in vinegar and plain water, and they will decrease in size when they soak in liquids that have a lower concentration of water, such as salt water.

### Chapter 1 Project Worksheet 2 (p. 7)

Column 4 in the table should read: 70 percent (liquid A); 92 percent (liquid B); 87 percent (liquid C); 79 percent (liquid D)

1. Liquids A and D would cause the cell to lose water; liquids B and C would cause the cell to take in water.
2. Possible answers might include shampoo, syrup, ketchup, or honey.

### Section 1-1 Review and Reinforce (p. 11)

1. Hooke
2. First person to observe bacteria
3. Schleiden
4. Concluded that all animals are made up of cells
5. Virchow
6. Magnification and resolution are both important properties of a microscope. Magnification is the ability to increase how large an object appears, whereas resolution is the ability to bring the details of the object into focus.
7. An electron microscope uses electrons instead of light to magnify an object, and it can view an object with much greater magnification and resolution than a light microscope.
8. Cells are the basic unit of structure and function in living things, and all living things are composed of cells.
9. b
10. e
11. d
12. c
13. a
14. g
15. f

### Section 1-1 Enrich (p. 12)

1. Transmission electron microscopes (TEM) and transmission positron microscopes (TPM) both use beams of atomic particles to view specimens. However, the TPM uses beams of positrons, which do not harm living things, whereas the TEM uses beams of electrons, which living things cannot withstand. Therefore, unlike the TEM, the TPM can be used to view living specimens.
2. Acoustic microscopes bounce high-frequency sound waves off an object. The echoes of the sound waves are then translated onto a screen as a microscopic image.
3. Transmission positron microscopes and acoustic microscopes can be used to view cells that are still alive and functioning. Electron microscopes, on the other hand, can be used to view only cells that are no longer alive.

### Section 1-2 Review and Reinforce (p. 15)

1. cytoplasm
2. endoplasmic reticulum
3. nucleus
4. mitochondrion
5. cell membrane
6. Organelles
7. cell wall
8. cell membrane
9. nucleus
10. chromatin
11. cytoplasm
12. Mitochondria
13. endoplasmic reticulum
14. Ribosomes
15. Golgi bodies
16. chloroplasts
17. vacuole

### Section 1-2 Enrich (p. 16)

1. (1) builds new structures; (2) carries materials from place to place; (3) produces power; (4) produces food; (5) disposes of waste; (6) controls the rest of Cell City; (7) stores foods and water; (8) controls what enters and leaves Cell City

The Science of Photobiology K. C. Smith, 2013-11-11 Although there are several excellent books covering a few of the specialized areas of photobiology at the present time there is no book that covers all areas of the science of photobiology This book attempts to fill this void The science of photobiology is currently divided into 14 subspecialty areas by the American Society for Photobiology The first 14 chapters of this book deal with those subspecialty areas each written by a leader in the field Chapter 15 entitled New Topics in Photobiology highlights areas of research that may be designated subspecialties of photobiology in the future This book has been written as a textbook to introduce the science of photobiology to advanced undergraduate and graduate students The chapters are written to provide

a broad overview of each topic They are designed to contain the amount of information that might be presented in a one to two hour general lecture The references are not meant to be exhaustive but key refer ences are included to give students an entry into the literature Frequently a more recent reference that reviews the literature will be cited rather than the first paper by the author making the original discovery Whenever practical a classroom demonstration or simple laboratory exercise has been provided to exemplify one or more major points in a chapter Whitaker's Book List ,1991 Meselson, Stahl, and the Replication of DNA Frederic Lawrence Holmes,2008-10-01 In 1957 two young scientists Matthew Meselson and Frank Stahl produced a landmark experiment confirming that DNA replicates as predicted by the double helix structure Watson and Crick had recently proposed It also gained immediate renown as a most beautiful experiment whose beauty was tied to its simplicity Yet the investigative path that led to the experiment was anything but simple Frederic L Holmes shows in this masterful account of Meselson and Stahl s quest This book vividly reconstructs the complex route that led to the Meselson Stahl experiment and provides an inside view of day to day scientific research its unpredictability excitement intellectual challenge and serendipitous windfalls as well as its frustrations unexpected diversions away from original plans and chronic uncertainty Holmes uses research logs experimental films correspondence and interviews with the participants to record the history of Meselson and Stahl s research from their first thinking about the problem through the publication of their dramatic results Holmes also reviews the scientific community s reception of the experiment the experiment s influence on later investigations and the reasons for its reputation as an exceptionally beautiful experiment Trinity and Organism James Eglinton,2012-03-29 This book explores the organic motif found throughout the writings of the Dutch Calvinist theologian Herman Bavinck 1854 1921 Noting that Bavinck uses this motif at key points in the most important loci of theology Christology general and special revelation ecclesiology and so forth it seems that one cannot read him carefully without particular attention to his motif of choice the organic By examining the sense in which Bavinck views all of reality as a beautiful balance of unity in diversity James Eglinton draws the reader to Bavinck s constant concern for the doctrine of God as Trinity If God is the Father the Son and the Holy Spirit Bavinck argues the creation must be more akin to an organism than a machine Trinity and organism are thus closely linked concepts Eglinton critiques and rejects the two Bavincks one orthodox and the other modern hermeneutic so commonplace in discussions of Bavinck s theology Instead this book argues for a reunited Herman Bavinck as a figure committed to the participation of historic orthodox theology in the modern world
