

Thread requirements

- ◆ An execution state
- ◆ Independent PC working within the same process.
- ◆ An execution stack.
- ◆ Per-thread static storage for local variables.
- ◆ Access to memory and resources of the creator-process shared with all other threads in the task.
- ◆ Key benefits: less time to create than creating a new process, less time to switch, less time to terminate, more intuitive for implementing concurrency if the application is a collection of execution units.
