ROUNDING

We round numbers to make them easier to work with or if we want to express a number to a particular level of accuracy. Numbers are rounded to a particular place to make the number as close to a "round" number as possible.

Some things to be careful of:

- We never say that we round "to the ones place". Instead we round "to the nearest whole number".
- Watch for "ten" and "tenth", "hundred" and "hundredth", etc.

Example 1: Round 854 917.632 ...

- ...to the nearest hundred.
- ...to the nearest thousand.
- ...to the nearest tenth.

Solution: In all cases of rounding, find the digit in the place we want to round to, then look at the digit to its right to decide how to round:

- If the digit to the right is 0, 1, 2, 3 or 4 we leave the digit alone (**round down**).
- If the digit to the right is 5, 6, 7, 8 or 9 we increase the digit by 1 (**round up**).

Finally we remove any extra digits that have been rounded off, leaving zeroes if needed.

(a) The hundreds place in 854 917.632 is the 9. We have to decide whether to keep the nine or round it up. The digit to the right of the 9 is a 1, so we round down — we leave the 9 alone. All the numbers after the 9 get turned into "0", and we remove any zeroes after the decimal: 854 900. Notice the answer is a whole number of hundreds.

(b) The thousands place is the 4. The number to its right is the 9, so we round up—the 4 becomes a 5. The answer is 855 000.

(c) The number in the tenths place is 6. To its right is a 3, so we round down. The answer is 854 917.6.
