

Pantograph for reducing and enlarging work in two and three dimensions, with cutter spindle and spindle drive system

Fig 4 Aligning cutter and tracer pin with straightedge attachment

Fig 5 Pantograph locking attachment

Fig 6 Reducing an escutcheon die from a steel master (GK 12)

The basic design feature of the GK machines is a pantograph which transfers all 3-dimensional tracer pin motions to the cutting tool, in the same direction and at a preset duplicating ratio. The pattern or master and the workpiece are always clamped in conjugate positions at roughly the same level, right in front of the operator, for maximum convenience and ease of operation. The pantograph will give a mathematically true reproduction of the template

or pattern contours if the diameters of tracer pin and cutter are selected in accordance with the duplicating ratio and if the points of tracer pin and cutter are in alignment with the axis of the horizontal pivot shaft. This latter condition can be met with the aid of a straightedge attachment (Fig 5). The weight of the pantograph assembly is counterbalanced in all positions by an adjustable spring. The rigid pantograph legs and carefully selected

antifriction bearings in all joints provide a high degree of accuracy and sensitivity in duplicating operations. The pantograph can be locked in the horizontal plane for 2-dimensional work or immobilized completely for plain milling work without a pattern or master, e.g. by scribed lines (Fig. 6). The feed motions will then be performed by the workpiece. The duplicating ratio can be set directly by means of graduated scales.
