changing how people accessed circulated and structured information Robertson's unconventional history of the origins of the information age posits the filing cabinet as an information storage container an automatic memory machine that contributed to a new type of information labor privileging manual dexterity over mental deliberation Gendered assumptions about women's nimble fingers helped to naturalize the changes that brought women into the workforce as low level clerical workers The filing cabinet emerges from this unexpected account as a sophisticated piece of information technology and a site of gendered labor that with its folders files and tabs continues to shape how we interact with information and data in today's digital world

National Computer Security Conference Proceedings, 1992 DIANE Publishing Company, 1992-11 Held October 13-16 1992 Emphasizes information systems security criteria how it affects us and the actions associated with organizational accreditation These areas are highlighted by emphasizing how organizations are integrating information security solutions Includes presentations from government industry and academia and how they are cooperating to extend the state of the art technology to information systems security 72 refereed papers trusted systems tutorial and 23 executive summaries Very valuable Must buy
