

Wireless Communication Projects for Engineering Students

With the advent of [wireless communication technology](#), it has now become possible to accomplish communication between any two or more entities by avoiding the usage of physical wires. These wireless communication projects often tend to run on several advanced wireless techs like Bluetooth, Infrared radiation (IR), etc. to fulfill varying application needs.

Notable Communication Project techs

As we already know, communications can be accomplished using several advanced wireless techs. The same applicable for wireless communication projects. Some of the notable communication project techs are as follows:

- Bluetooth
- Infrared radiation (IR)
- ZigBee
- Global Positioning System (GPS)
- Global System for Mobile Communications (GSM)
- Flexible Interconnection Device (FID)

Prospects of Wireless communications

As establishing communication over large distance using the physical wires is impossible, the tech of wireless communication comes handy to establish such communications. The same is being deployed by many Indian telecommunication companies, which employs certain energy type to transfer data across large distances and eliminating the need of physical wires.

By using radio waves, these techs promote both long- and short-distance radio communications. This type of communication is found to be deployed in portable, stationary, and mobile devices (for instance, smart phones and radios). By using diverse wireless communication concepts, the wireless communication projects can serve many applications like satellite vision; Wireless Sensor Networks (WSNs); deep water communications; wireless gadgets; remote monitoring; alert devices; etc.
