Strategic Airport Planning Mike Brown, 2022-04-10 This book will explore a new approach to airport planning that better captures the complexities and velocity of change in our contemporary world As a result it will lead to higher performing airports for users business partners investors and other stakeholders This is especially pertinent since airports will need to come back better from the Covid 19 pandemic The book explains the importance of articulating a clear strategy based on a rigorous analysis of the competitive landscape while avoiding the pitfalls of ambiguity and virtue signalling Having done so demand forecasts can be developed that resemble S curves not

simple straight lines that reflect strategic opportunities and threats from which a master plan can be developed to allocate land and capital in a way that maximizes return on assets and social licence The second distinctive feature of this book is the premise that planning an airport as an island a fortress even does not work anymore given how interconnected airports are with other components of the transportation system the economies and communities they serve and the rapid pace of social and technological change In summary the book argues that airport planning needs to move beyond its traditional boundaries The book is replete with real examples from airports of all sizes around the world and includes practical advice and tools for executives and managers It is recommended reading for individuals working in the airport business or the broader air transport industry members of airports board of directors who may be new to the business elected officials policy makers and urban planners in jurisdictions hosting or adjacent to airports regulators economic development professionals and finally students

Designing Human-Swarm Interaction Systems

Oscar Bjurling,2025-02-20 Swarms of Unmanned Aerial Vehicles UAVs or drones are envisioned to transform various fields from emergency response to law enforcement and military operations Drone swarms provide scalable adaptable and decentralized solutions for dynamic work environments However the successful integration of these multi agent systems into real world settings presents significant challenges particularly in terms of how humans can safely and effectively interact with and control these systems Human Swarm Interaction HSI aims to address these challenges by exploring how human operators can manage multiple drones in a cohesive manner even under highly complex uncertain conditions This thesis studies the problem of designing effective interaction mechanisms and interfaces for human operators to command drone swarms specifically addressing challenges such as managing a large number of drones supporting operators situational awareness and balancing between centralized and decentralized control The research highlights the necessity of rethinking conventional approaches by introducing alternative conceptual models such as the choir metaphor which re imagines drone swarms as coordinated semi centralized ensembles rather than purely emergent decentralized collectives This metaphor aims to balance the collective often unpredictable behavior of drone swarms with the predictable directed actions needed in operational environments By demonstrating how this metaphor can be operationalized in an HSI system architecture the thesis provides new avenues for conceptualizing human interaction with autonomous systems Using a design research approach incorporating multiple case study and scenario based design activities to envision future swarm application in dialogue with prospective end users the thesis develops and evaluates prototypes that embody these nuanced HSI concepts The interface prototypes draw design inspiration from Real Time Strategy RTS games These elements include group commands high level mission planning and resource pooling to create a hybrid interaction model that allows operators to maintain both a broad overview and precise control of multiple autonomous and collaborating drones Domain expert evaluations of these prototypes in contexts such as firefighting and airport management validate the practical utility of these

concepts The findings emphasize the value of adopting a Human Technology Organization HTO perspective in the design of HSI systems Rather than focusing solely on the interaction between humans and technology this systems thinking approach acknowledges that drone swarms must be integrated into larger organizational frameworks such as emergency response command structures or airport ground operations teams It demonstrates that successful deployment requires accounting for the broader organizational context including roles workflows and coordination needs This holistic approach to HSI system design ensures that drone swarms not only meet technical performance criteria such as reliability responsiveness and scalability but also align with human and organizational needs facilitating their adoption and effective use in a wide range of real world scenarios Ultimately these contributions are intended to bridge the gap between theoretical models of swarm control and practical deployment advancing both the field of HSI and the broader adoption of drone swarm technologies

perspektiv vid utformningen av MSI system. Snarare än att enbart fokusera på interaktionen mellan människor och teknik erkänner detta systemtänkande tillvägagångssätt att drifsvärmen måste integreras i större organisatoriska ramverk som ledningsstrukturer för utbildningsinsatser eller markoperativa team på flygplatser. Det visar att framgångsrik implementering av drifsvärmen kräver att systemutvecklare tar hänsyn till det bredare organisatoriska sammanhanget inklusive roller, arbetsflöden och samverkansbehov. Detta holistiska tillvägagångssätt för utformningen av MSI system säkerställer att drifsvärmen inte bara uppfyller tekniska prestandakriterier som tillförlitlighet, responsivitet och skalbarhet utan också verensstämmer med mänskliga och organisatoriska behov vilket underlättar deras införande och effektiv användning i en mängd olika tillämpningsscenarier. Verklag dessa forskningsbidrag avsedda att verbrygga gapet mellan teoretiska modeller för självstyrning och praktisk implementering och därmed avancera och främja både MSI områden och den bredare användningen av svärmteknologier.
