document streams Such misalignment can degrade the performances of various downstream tasks including online document classification and dynamic information retrieval at the topic level Additionally the challenge of coherent topic modeling is particularly relevant due to the noise and large scale of social media datasets Messages on social media platforms often consists of only a few words resulting in a lack of significant context Models applied directly to this type of text frequently encounter the problem of feature sparsity which can yield unsatisfactory outcomes In the context of emotion detection public emotions are known to fluctuate across different topics and topics can evoke public emotion Thus there is a strong interconnection between topic discovery and emotion detection Jointly modeling topics and emotions is a suitable strategy for these tasks This book also examines the impact of topics on emotion detection and other related areas Energy Research Abstracts ,1992
