**Teaching and Learning Online** Franklin S. Allaire,Jennifer E. Killham,2023-01-01 Science is unique among the disciplines since it is inherently hands on However the hands on nature of science instruction also makes it uniquely challenging when teaching in virtual environments How do we as science teachers deliver high quality experiences to secondary students in an online environment that leads to age grade level appropriate

science content knowledge and literacy but also collaborative experiences in the inquiry process and the nature of science. The expansion of online environments for education poses logistical and pedagogical challenges for early childhood and elementary science teachers and early learners. Despite digital media becoming more available and ubiquitous and increases in online spaces for teaching and learning, Killham et al 2014, Wong et al 2018, PreK 12 teachers consistently report feeling underprepared or overwhelmed by online learning environments. Molnar et al 2021, Seaman et al 2018. This is coupled with persistent challenges related to elementary teachers' lack of confidence and low science teaching self-efficacy. Brigid Borrachero Bermejo, Gunning Duran, Duran 2004. Ideal for undergraduate teacher candidates, graduate students, teacher educators, classroom teachers, parents, and administrators, this book addresses why and how teachers use online environments to teach science content and work with elementary students through a research-based foundation.

**Service Learning as Pedagogy in Early Childhood Education** Kelly L. Heider, 2016-10-14. This book presents the most recent theory, research, and practice on service learning as it relates to early childhood education. It describes several service learning programs, many of which were developed to better prepare pre-service teachers for the challenges they face in today's early childhood classrooms, including class size, ever-changing technology, diversity, high stakes testing, parental involvement, or the lack thereof, and shrinking budgets. The book shares stories of positive outcomes from pre-service teachers who, having participated in service learning programs, report a shift in their attitudes and beliefs, including an increased empathy for others, a heightened sensitivity to student differences, more democratic values, and a greater commitment to teaching. In addition, the book examines the effects of service learning and positive outcomes for children and teacher educators as well. Schools today face an increasing number of language learners, the mainstreaming of special population students, and working with a standards-driven curriculum. All of these present new challenges for teachers as they attempt to meet their students' educational needs. As a result of this new classroom environment and the educational needs they present, teacher educators must now seek different approaches to prepare prospective teachers to meet these needs because the traditional approaches to teacher preparation, such as coursework independent of fieldwork, are no longer effective in equipping teachers to address these issues. This book examines in detail the new approach of service learning.
